K Ply: Public Comment Period Open

Draft Periodic Review Report available for your review and comment: **May 14 –June 15, 2026**

This site on Port Angeles Harbor was used as a lumber mill and plywood mill from 1926 to 2011. The site is in the process of being redeveloped but is currently vacant except for a wash facility to clean yachts.

2016 cleanup included removing over 50,000 tons of soil, bioremediation, and groundwater monitoring. Ecology conducted a periodic review to ensure human health and the environment are still protected.

Draft Periodic Review Report Results

Ecology found that the cleanup is generally working as intended. However, concentrations of diesel in groundwater remain above cleanup levels. Diesel levels may not reach cleanup goals within 10 years of the cleanup work (by 2026), as planned.

The property owner, the Port of Port Angeles, in coordination with Ecology, will collect data to inform a decision on whether more cleanup is needed to address diesel concentrations.

The Port is also responsible for sampling groundwater twice a year to monitor the cleanup effectiveness.

The next periodic review will be in about 5 years. Download the full report or subscribe to automatic updates about this site at go.ecology.wa.gov/28.
