Marinas and Small Fueling Facilities Class 4 Inspection Checklist

Facility Name:

Facility Phone Number:

Facility contact during inspection:

Facility Email:

Inspector(s):

Date/ Time of Inspection:

	Requirement	Yes	No	Remarks
OIL TRANSFER	Records of Oil Transfer Training kept at facility			
TRAINING	and available to Ecology inspectors.			
	Training includes dangers and safe practices of			
WAC 173-180-210(2)	oil transfers, safe and effective use of response			
	equipment, and spill notification procedures.			
NOTIFICATION	Employees know notification procedures and			
INFORMATION	have ready access to notification phone			
	numbers.			
WAC 173-180-210 (3-6)	Notification procedures posted at the fuel dock			
	for customers to see. Notification phone			
	numbers include WA EMD, USCG, Spill Response			
	Contractor, and Facility's 24-hour response			
	contacts.			
OIL TRANSFER	Hoses and piping free of defects which would			
EQUIPMENT	permit the discharge of oil.			
WAC 173-180-205	All oil transfer equipment (pumps, valves, hoses,			
	piping, etc.) tested annually by required			
	method.			
RESPONSE AND	Minimum 200' of sufficient and appropriate			
RECOVERY	boom in standby position.			
EQUIPMENT	Spill sorbents, containers suitable for holding			
	recovered oil, non-sparking scoops/shovels and			
WAC 173-180-210 (1)	buckets to cleanup 25-gallon spill available.			
	(150 - 200 standard 18" square sorbent capacity is			
	about 25 gallons)			
	Personal protective gear necessary to safely			
	respond to spill (clothing or splash protection,			
	gloves, glasses) available.			

□ Facility in **compliance** with WAC.

□ Facility in **violation** of WAC, corrective measures required.

WASHINGTON ADMINISTRATIVE CODE (WAC) REQUIREMENTS

WAC 173-180-025 Definitions. (11) "Class 4 facility" means a structure that

- (a) Is a marina, boatyard, marine fueling outlet, and other fueling installations that transfer to a non-recreational vessel with a capacity to hold less than 10,500 gallons of oil whether the vessel's oil capacity is used for fuel, lubrication oil, bilge waste, or slops or other waste oil;
- (b) Does not transfer oil in bulk to or from a tank vessel or pipeline; and
- (c) Does not include any: Railroad car, motor vehicle, or other rolling stock while transporting oil over the highways or rail lines of this state; underground storage tank regulated by ecology or a local government under chapter 70A.355 RCW; or a motor vehicle motor fuel outlet; or a facility that is operated as part of an exempt agricultural activity as provided in RCW 82.04.330.

WAC 173-180-205 Oil transfer equipment at Class 1, 2, 3, and 4 facilities.

- (1) All hoses, pipelines, or piping used in an oil transfer operation must meet the following criteria:
 - (a) Hoses, pipelines, or piping must be supported so as to avoid crushing or excessive strain. Flanges, joints, hoses, and piping must be visually checked prior to the transfer for cracks and signs of leakage.
 - (b) All hoses and loading arms are long enough to allow the vessel to move to the limits of its moorings without placing strain on any component of the oil transfer equipment.
 - (c) Each hose must have no unrepaired loose covers, kinks, bulges, soft spots, or any other defect which would permit the discharge of oil or hazardous material through the hose material and no gouges, cuts, or slashes that penetrate the first layer of hose reinforcement. For the purposes of this section, reinforcement means the strength members of the hose, consisting of fabric, cord and/or metal.
 - (d) Hoses, pipelines, or piping must not be permitted to chafe on the dock or vessel or be in contact with any source that might affect the integrity of the hoses or piping.
 - (e) Hose or loading arm ends must be blanked tightly when moved into position for connection and immediately after they are disconnected. Residue must be drained either into vessel tanks or suitable shoreside receptacles before the hoses or loading arm ends are moved away from their connections.
- (2) Testing of all oil transfer equipment, including, but not limited to, pumps, valves, piping, manifolds, connections, and hoses, must be done annually, and must be conducted by using one of the following methods:
 - (a) In accordance with manufacturers' recommendations and industrial standards;
 - (b) Procedures identified in 33 CFR Part 156.170; or
 - (c) Another standard approved by ecology, as long as the requirements in such standard equal or exceed those required in this section.

WAC 173-180-210 Requirements for Class 4 facilities

- (1) **Response and recovery equipment.** The owner or operator of each Class 4 facility must ensure that cleanup of at least a 25 gallon spill can occur by having response and recovery equipment maintained in a standby condition and available to the receiving vessel, including:
 - (a) Sufficient and appropriate boom of no less than 200 feet available in the standby position;
 - (b) Oil spill sorbent materials appropriate for use in water and on land;
 - (c) Non-sparking hand scoops, shovels, and buckets;
 - (d) Containers suitable for holding the recovered oil and oily water; and
 - (e) Protective clothing and other appropriate personal protective gear necessary to safely respond to oil spills.
- (2) Trained personnel. The owner or operator of each facility must:
 - (a) Provide annual training for employees involved in an oil transfer operation that at a minimum includes:
 - i. Dangers and safe practices regarding the petroleum products transferred at that location;
 - ii. Safe and effective use and handling of response and recovery equipment; and
 - iii. Spill notification procedures.
 - (b) Train all employees with oil transfer duties within 90 calendar days of the date of hire. No employee may be in charge of an oil transfer operation at the facility without proper training.
 - (c) Keep a record of oil transfer training at the facility and make the record available to ecology upon request pursuant to WAC 173-180-040.
- (3) **Spill notification information.** The owner or operator of each facility must provide spill notification information on a wallet-sized card for each employee and posted at the dock for fueling customers. The notification information must include:
 - (a) Required notifications in RCW 90.56.280;
 - (b) A phone number for a spill response contractor; and
 - (c) If the facility is not always staffed, a 24-hour phone number where someone designated by the owner or operator of the facility can be reached to start the spill response. The contact phone number must be posted on the dock or transfer location in a location that is easy to see.
- (4) The owner or operator of each facility must ensure all oil transfer equipment is properly inspected and maintained in accordance with WAC 173-180-205.
- (5) Facilities that are transferring less than 3,000 gallons of oil in a single transaction, are exempt from advance notice requirements for oil transfer operations as described in RCW 88.46.165.
- (6) **Semi-annual reporting.** Facilities must report all bulk oil transfers conducted at the facility.
 - (a) The report must include types of oil transferred and total volume of transfers by oil type.
 - (b) The facility must submit the report to ecology each year by January 15th for the period July 1st through December 31st of the previous year, and by July 15th for the period January 1st through June 30th.

The Semi-annual Report Form must be submitted by email to: OilTransferNotifications@ecy.wa.gov
