**Crude Oil Information**

Provide the following information for each state or province of origin of crude oil for the reporting period:

- Type of crude oil:
  - Select sweet or sour designation.
  - Select API gravity range.
  - API gravity as measured by the weighted mean for each range.
- Volume of crude oil in barrels.

<b>How to calculate weighted mean:</b>
1. For each batch or stream from this state/province of origin, sulfur content category, and API gravity range, multiply the volume by the API gravity.
2. Sum the results of step 1.
3. Sum the volume of each shipment.
4. Divide the result of step 2 by the result of step 3.
