TECHNICAL MEMORANDUM

Puget Sound Stormwater BMP Cost Database

Prepared for

Washington State Department of Ecology
Environmental Assessment Program
P.O. Box 47600
Olympia, Washington 98504-7600

Prepared by

Herrera Environmental Consultants
2200 Sixth Avenue, Suite 1100
Seattle, Washington 98121
Telephone: 206.441.9080

January 4, 2012

Introduction and Purpose

As part of the Phase 3 study of toxic chemicals in surface runoff to Puget Sound, Herrera Environmental Consultants (Herrera) gathered costs for best management practices (BMPs) installed in the Puget Sound region to be integrated into the System for Urban Stormwater Treatment and Analysis INtegration (SUSTAIN) model. SUSTAIN was developed by the U.S. Environmental Protection Agency (EPA) as a decision support system to facilitate the selection and placement of BMPs and Low Impact Development (LID) techniques at strategic locations in urban watersheds. The BMP cost database is one of the key components of the SUSTAIN framework; however, it was developed using information obtained from national sources. In order to make this model more useful for local projects, BMP cost information for the following BMPs was collected from projects constructed in Puget Sound:

- Bioretention
- Cistern
- Constructed Wetland
- Grassed Swale
- Green Roof
- Infiltration Trench
- Porous Pavement
- Rain Barrel
- Vegetated Filter Strip
- Wet Pond

The purpose of this memorandum is to summarize the initial BMP cost compilation. While not intended as a comprehensive assessment, this initial compilation will be used to evaluate BMP options for a commercial basin in the City of Federal Way (Herrera 2012). The cost database is intended to be updated on a regular basis and will be available on the project website developed for the Phase 3 study: http://www.ecy.wa.gov/programs/eap/toxics/sustainmodeling.html.

The process for collecting this cost information included the following:

- Early August 2011 – Cost request templates (Microsoft Excel spreadsheets) were developed for each BMP listed above and posted on a project-specific webpage (http://www.herrerainc.com/bmpcostsforpugetsound)
- August 16, 2011 – Washington State Department of Ecology (Ecology) regional permit coordinators sent out a request to their permittees
- August-October 2011 – Internet research on cistern and rain barrel costs and existing cost documentation for stormwater BMP projects in the Puget Sound region
- August-October 2011 – Phone calls and e-mail requests to vendors with porous pavement, cistern, and green roof products

- September and October 2011 – Targeted phone calls and e-mail requests to local jurisdictions that had received Ecology grant funding or had recently constructed projects with stormwater BMP components

This memorandum summarizes the project information, unit costs, and total BMP costs that were gathered for each BMP type. The costs provided in this memorandum are the best estimate of cost per square foot (or cubic foot) based on the available information and may include varying levels of detail depending on the information available (bid tabs, construction drawings, etc.). Some of the cost estimates may include mobilization, erosion and sediment control, traffic control, plantings on other portions of the site, and other project components if the cost provided was the total for the entire project and could not be broken out based on specific stormwater BMPs. If bid tabs and quantities were available, the cost per square foot was calculated based on the line items that were directly related to the stormwater facility. These cost estimates typically did not incorporate mobilization, erosion and sediment control, and traffic control, but may have included surrounding landscaping in addition to plantings incorporated into BMP design. Cost estimates were converted to 2012 cost estimates using the Engineering News-Record construction cost index (CCI).

The master cost database is included as Attachment 1. Individual cost request spreadsheets received by or filled out from information received from cities, counties, ports, WSDOT, vendors, or private owners are included as Attachment 2.

Bioretention

Bioretention refers to engineered facilities (i.e., bioretention cells, bioretention swales, rain gardens) that store and treat stormwater by passing it through a specified soil profile.

Projects

Table 1 summarizes information related to bioretention facilities. Cost information for 21 bioretention facilities from 7 cities, 3 counties, and 1 port facility was gathered for the Puget Sound BMP cost database.

Unit Costs

Table 2 summarizes the minimum, average, and maximum costs for each bioretention component.

Unit costs currently in the SUSTAIN BMP cost database that were not provided during the Puget Sound BMP cost database data gathering effort include:

- Backfilling (CF)
- Grading/finishing (SF)

Table 1. Bioretention project information.

City/County/Vendor	Project Name	Source
City of Auburn	West Valley Highway Improvements Project	Bid tabs and takeoffs

Snohomish County	Silver Creek Basin LID Retrofits	Engineer's estimate
Thurston County	Evergreen Terrace – Phase III	Bid tabs

Total Bioretention Cost

Table 3 summarizes the minimum, average, and maximum construction and operation and maintenance (O&M) costs for bioretention as a function of surface area (cost per square foot). Construction costs were calculated based on the unit cost information presented in Table 2 (when bid tabs and quantities were available) and jurisdictional "per square foot" costs (when provided). Note that these unit area facility costs do not necessarily reflect all associated construction costs because costs such as mobilization, temporary erosion and sediment control, and traffic control, were not included in the cost database. Design costs are presented in Table 3 as a percentage of the corresponding construction cost. Design costs were calculated based on jurisdiction submittals and projects where both design and construction costs were provided.

Table 2. Bioretention unit cost information.

BMP Component	Unit	n	Cost			Currently in SUSTAIN?
			Low	Average	High	
Check dam	Per unit	1	$155.20	$155.20	$155.20	No
Compost	CF	4	$0.66	$1.11	$1.68	No
Emergents	Per unit	1	$2.69	$2.69	$2.69	No
Excavation	CF	7	$0.20	$0.79	$1.58	Yes
Filter Fabric	SF	5	$0.28	$0.74	$1.15	Yes
Grass	SF	5	$0.02	$0.53	$1.26	Yes
Gravel	CF	8	$0.56	$1.78	$3.05	Yes
Ground Cover	Per unit	2	$3.29	$5.49	$7.69	No
Inlet Structure	Per unit	2	$1,390	$4,575	$7,760	Not as an option for this BMP type
Mulch	CF	8	$0.68	$1.28	$1.98	Yes
Observation Well	Per unit	1	$213.86	$213.86	$213.86	No
Outlet Structure	Per unit	3	$695.04	$5,297	$12,416	Not as an option for this BMP type
Perennials	Per unit	5	$1.66	$5.60	$10.09	Yes
	SF	1	$3.94	$3.94	$3.94	
Small Trees	Per unit	8	$3.05	$60.04	$222.46	Yes

Streambed Cobbles	CF	1	$7.92	$7.92	$7.92	No
Underdrain Pipe	Feet	3	$10.09	$24.75	$41.39	Yes
Woody Shrubs	Per unit	6	$6.57	$81.05	$435.67	Yes
	SF	3	$2.20	$3.99	$5.77	

n: number of facilities
CF: cubic feet
SF: square feet

Table 3. Bioretention project cost information.

BMP Component	Unit	n	Cost/Percentage			Currently in SUSTAIN?
			Low	Average	High	
Bioretention	SF	23	$4.28	$31.61	$88.75	No
O&M	SF	7	$0.19	$1.27	$2.78	No
Design [a]	%	5	12%	67%	159%	No

[a] Design costs are presented as a percentage of construction costs. A percentage of costs were calculated for the bioretention facilities if bid tabs and quantities were available.

n: number of facilities
SF: square feet

Cistern

Cisterns are underground or aboveground tanks constructed of fiberglass, polyethylene, concrete, metal, or wood that are used for water storage and reuse.

Projects and Products

Table 4 summarizes information related to cisterns. Cost information for 14 cisterns from 1 city and 4 vendors was gathered for the Puget Sound BMP cost database.

Table 4. Cistern project and product information.

City/Vendor	Project/Product Name	Source
Aquabarrel Rain Barrel	Complete Cistern	Vendor website
Aquabarrel Rain Barrel	Fat Boy Water Wall	Vendor website
Aquabarrel Rain Barrel	Rainwater Pillow	Vendor website

Seattle Public Utilities	Rainwise – Private Cisterns	Life-cycle cost of Green Stormwater Infrastructure for the CSO LTCP report

Total Cistern Cost

Table 5 summarizes the minimum, average, and maximum costs for cisterns per unit and as a function of volume (cost per cubic foot). The City of Seattle cistern costs were provided as a function of the mitigated drainage area (cost per square foot). Additional costs may also need to be added for shipping and tax.

Table 5. Cistern cost information.

BMP Component	Unit	n	Cost			Currently in SUSTAIN?
			Low	Average	High	
Cistern	Per unit	27	$2.07	$12.98	$46.56	Yes
	CF	27	$58.98	$4,360	$28,044	No
	SF	1	$2.78	$2.78	$2.78	No
Screen	Per unit	1	$19.66	$19.66	$19.66	No

n: number of products (Multiple costs [low, mid range, and high] were included for some cisterns)
CF: cubic feet
SF: square feet

Constructed Wetland

A constructed wetland is a shallow man-made pond that is designed to treat stormwater through biological processes associated with emergent aquatic plants.

Projects

Table 6 summarizes information related to constructed wetland facilities. Cost information for four constructed wetland facilities from three cities was gathered for the Puget Sound BMP cost database.

Table 6. Constructed wetland project information.

City	Project Name	Source
City of Arlington	Arlington Constructed Stormwater Wetland	E-mail from City
City of Bellingham	Brentwood Rock Plant Filter Retrofit	Cost request spreadsheet
City of Bellingham	Eliza Road Improvements	Cost request spreadsheet
City of Redmond	Bear Creek Park Water Quality Facility	Bid tabs and drawings

Unit Costs

Table 7 summarizes the minimum, average, and maximum costs for each constructed wetland component.

Table 7. Constructed wetland unit cost information.

BMP Component	Unit	n	Cost			Currently in SUSTAIN?
			Low	Average	High	
Excavation	CF	1	$0.77	$0.77	$0.77	Yes
Inlet Structure	Per unit	1	$2,256	$2,256	$2,256	Yes
Outlet Structure	Per unit	2	$5,586	$6,427	$7,269	Yes
Perennials	Per unit	1	$2.85	$2.85	$2.85	Yes
	SF	2	$1.52	$1.68	$1.83	
Seal (Clay Liner)	SF	1	$1.42	$1.42	$1.42	Not as an option for this BMP type
Small Trees	Per unit	3	$28.97	$121.75	$232.80	Not as an option for this BMP type
Soil/Planting Media	CF	1	$0.57	$0.57	$0.57	Yes
Woody Shrubs	Per unit	2	$9.31	$11.90	$14.49	Not as an option for this BMP type

n: number of facilities
CF: cubic feet
SF: square feet

Unit costs currently in the SUSTAIN BMP cost database that were not provided during the Puget Sound BMP cost database data gathering effort include:

- Backfilling (CF)
- Grading/finishing (SF)
- Mulch (CF) – not commonly used

Total Constructed Wetland Cost

Table 8 summarizes the minimum, average, and maximum construction costs for constructed wetlands as a function of surface area (cost per square foot). Construction costs were calculated based on the unit cost information presented in Table 7 (when bid tabs and quantities were available) and jurisdictional "per square foot" costs (when provided). Note that these unit area facility costs do not necessarily reflect all associated construction costs because costs such as mobilization, temporary erosion and sediment control, and traffic control, were not included in the cost database. Design costs are presented in Table 8 as a percentage of the corresponding construction cost. Design costs were calculated based on jurisdiction submittals and projects where both design and construction costs were provided. O&M costs were not provided by the cities submitting cost data on their constructed wetland facilities.

Table 8. Constructed wetland project cost information.

BMP Component	Unit	n	Cost/Percentage			Currently in SUSTAIN?
			Low	Average	High	
Constructed Wetland	SF	4	$2.10	$8.81	$12.90	No
Design [a]	%	2	14%	23%	32%	No

[a] Design costs are presented as a percentage of construction costs. A percentage of costs were calculated for the bioretention facilities if bid tabs and quantities were available.

n: number of facilities

SF: square feet

Grassed Swale

A grassed swale (e.g., vegetated swale, biofiltration swale) is a drainage conveyance designed to have a shallow flow depth (i.e., less than 1 foot) and is primarily lined with grass and other ground cover species.

Projects

Table 9 summarizes information related to grassed swale facilities. Cost information for three grassed swale facilities from one city and the Washington State Department of Transportation (WSDOT) was gathered for the Puget Sound BMP cost database.

Table 9. Grassed swale project information.

City/Agency	Project Name	Source
City of Mount Vernon	Freeway Drive Improvements Phase II	Cost request spreadsheet
WSDOT	SR 518 Control Biofiltration Swale	Compost-amended biofiltration swale TER
WSDOT	SR 518 Compost-Amended Biofiltration Swale	Compost-amended biofiltration swale TER

TER: Technical Evaluation Report

Unit Costs

Table 10 summarizes the minimum, average, and maximum costs for each grassed swale component.

Table 10. Grassed swale unit cost information.

BMP Component	Unit	n	Cost			Currently in SUSTAIN?
			Low	Average	High	
Excavation	CF	1	$0.30	$0.30	$0.30	Yes
Grass	SF	1	$0.87	$0.87	$0.87	Yes
Outlet Structure	Per unit	1	$2,287	$2,287	$2,287	Not as an option for this BMP type
Underdrain Pipe	Feet	1	$30.73	$30.73	$30.73	Not as an option for this BMP type

n: number of facilities
CF: cubic feet
SF: square feet

Unit costs currently in the SUSTAIN BMP cost database that were not provided during the Puget Sound BMP cost database data gathering effort include:

- Grading/finishing (SF)

Other unit costs that were not provided during this cost gathering effort and are currently not included in the SUSTAIN BMP cost database, but may be incorporated into grassed swale designs include:

- Gravel (CF) – used as a flow spreader at the inlet, in the swale for wide swales, bedding around underdrain pipes, and as energy dissipaters (where needed)
- Compost (CF) – tilled into native soil or used as a compost blanket in a compost-amended biofiltration swale
- Ground Cover (SF) – could be used in combination with grasses
- Inlet Structure (per unit) – used for facilities with piped inflow

Total Grassed Swale Cost

Table 11 summarizes the minimum, average, and maximum construction and O&M costs for grassed swales as a function of surface area (cost per square foot). The City of Mount Vernon design was designated as a grass-lined rain garden. The range in costs for the WSDOT design is for a standard biofiltration swale (on the low end) and a compost-amended biofiltration swale (on the high end). Construction costs were calculated based on the unit cost information presented in Table 10 (when bid tabs and quantities were available) and jurisdictional "per square foot" costs (when provided). Note that these unit area facility costs do not necessarily reflect all associated construction costs because costs such as mobilization, temporary erosion and sediment control, and traffic control, were not included in the cost database. Design costs are presented in Table 11 as a percentage of the corresponding construction cost. Design costs were calculated based on jurisdiction submittals and projects where both design and construction costs were provided.

Table 11. Grassed swale project cost information.

BMP Component	Unit	n	Cost/Percentage			Currently in SUSTAIN?
			Low	Average	High	
Grass-lined Rain Garden	SF	1	$9.42	$9.42	$9.42	No
Grassed Swale	SF	2	$4.30	$4.59	$4.87	No
O&M	SF	1	$0.49	$0.49	$0.49	No
Design [a]	%	1	51%	51%	51%	No

[a] Design costs are presented as a percentage of construction costs. A percentage of costs were calculated for the bioretention facilities if bid tabs and quantities were available.

n: number of facilities

SF: square feet

Green Roof

A green roof (e.g., vegetated roof, eco-roof) can either be designed as an intensive roof with a deep soil profile (6 inches and deeper) planted with ground cover species, shrubs, and trees or an extensive roof with a shallow soil profile (1 to 5 inches) planted with ground cover species.

Projects

Table 12 summarizes information related to green roofs. Cost information for 11 green roofs and green roof components from 2 cities, 5 private, and 3 vendors was gathered for the Puget Sound BMP cost database.

Table 12. Green roof project information.

City/Private/Vendor	Product/Project Name	Source

Weston Solutions, Inc.	GreenGrid® Intensive Green Roof System	Vendor e-mail request

SF: square feet

Unit Costs

Table 13 summarizes the minimum, average, and maximum costs for each green roof component.

Table 13. Green roof unit cost information.

BMP Component	Unit	n	Cost			Currently in SUSTAIN?
			Low	Average	High	
Drainage Layer	SF	1	$3.10	$3.10	$3.10	No
Gravel	CF	1	$1.24	$1.24	$1.24	Not as an option for this BMP type
Root Barrier	SF	1	$2.28	$2.28	$2.28	No
Soil/Planting Media	CF	2	$3.41	$6.88	$10.35	Not as an option for this BMP type
Waterproof Membrane	SF	2	$9.31	$11.90	$14.49	No

n: number of facilities
CF: cubic feet
SF: square feet

Other unit costs that were not provided during this cost gathering effort and are currently not included in the SUSTAIN BMP cost database, but may be incorporated into green roof designs include:

- Mulch (CF)
- Grass (SF)
- Gravel (CF) – optional, sometimes used as ballast

- Perennials (SF or per unit) – optional
- Small Trees (SF or per unit) – optional
- Woody Shrubs (SF or per unit) – optional
- Outlet Drain (per unit)
- Irrigation System (SF) – optional

Total Green Roof Cost

Table 14 summarizes the minimum, average, and maximum construction and O&M costs for green roofs as a function of surface area (cost per square foot). Construction costs were calculated based on the unit cost information presented in Table 13 (when bid tabs and quantities were available) and jurisdictional "per square foot" costs (when provided). Note that these unit area facility costs do not necessarily reflect all associated construction costs because costs such as mobilization, temporary erosion and sediment control, and traffic control, were not included in the cost database. Design costs were not broken out separately from the total costs for these facilities.

Table 14. Green roof project cost information.

BMP Component	Unit	n	Cost			Currently in SUSTAIN?
			Low	Average	High	
Green Roof	SF	12	$11.32	$33.06	$121.46	Yes (as Green Roof System)
O&M	SF	1	$0.10	$0.10	$0.10	No

n: number of facilities
SF: square feet

Infiltration Trench

Infiltration trenches are long, narrow stormwater facilities backfilled with a coarse stone aggregate, allowing for temporary storage of stormwater in the void spaces. They are generally installed at grade, but can also be installed underground using a prefabricated infiltration gallery.

Projects

Table 15 summarizes information related to infiltration trenches. Cost information for four infiltration facilities (three infiltration galleries and one drywell) from one city and one county was gathered for the Puget Sound BMP cost database.

Table 15. Infiltration trench project information.

City/County	Project Name	Source
City of Lacey	2011 Street Overlay Project	Bid tabs
City of Lacey	Carpenter Road Reconstruction	Bid tabs
Thurston County	Evergreen Terrace - Phase 1	Bid tabs
Thurston County	Hawaiian Court Stormwater Improvements	Bid tabs

Unit Costs

Table 16 summarizes the minimum, average, and maximum costs for each infiltration trench component.

Table 16. Infiltration trench unit cost information.

BMP Component	Unit	n	Cost			Currently in SUSTAIN?
			Low	Average	High	
Excavation	CF	3	$0.47	$0.63	$0.92	Yes
Grass	SF	1	$0.32	$0.32	$0.32	Yes
Gravel	CF	2	$0.78	$1.26	$1.74	Yes

n: number of facilities
CF: cubic feet
SF: square feet

Unit costs currently in the SUSTAIN BMP cost database that were not provided during the Puget Sound BMP cost database data gathering effort include:

- Backfilling (CF)
- Filter Fabric
- Grading/finishing (SF)
- Mulch – not required by Ecology
- Observation Well
- Perennials – not required by Ecology
- Soil/Planting Media – not required by Ecology

Total Infiltration Trench Cost

Table 17 summarizes the minimum, average, and maximum construction costs for infiltration trenches per unit and as a function of surface area (cost per square foot). Construction costs were calculated based on the unit cost information presented in Table 16 (when bid tabs and quantities were available) and jurisdictional "per square foot" costs (when provided). Note that these unit area facility costs do not necessarily reflect all associated construction costs because costs such as mobilization, temporary erosion and sediment control, and traffic control, were not included

in the cost database. Design costs were not broken out separately from the total costs for these facilities. O&M costs were not provided by the jurisdictions submitting cost data for their infiltration trench facilities. None of the costs provided were for standard infiltration trenches since three of the designs involved infiltration galleries and once of the designs involved a drywell.

Table 17. Infiltration trench project cost information.

BMP Component	Unit	n	Cost			Currently in SUSTAIN?
			Low	Average	High	
Infiltration Trench	Per unit	1	$65,024	$65,024	$65,024	No
	SF	2	$83.48	$95.95	$108.43	No

n: number of facilities
SF: square feet

Porous Pavement

Porous pavement (i.e., permeable pavement) includes pervious concrete, porous asphalt, permeable pavers, and other forms of pervious or porous paving material (i.e., open-celled grids) intended to allow passage of water through the pavement section.

Projects

Table 18 summarizes information related to porous pavement installations. Cost information for 22 porous pavement installations in 6 cities, 1 county, 1 port facility, and 7 vendors was gathered for the Puget Sound BMP cost database. Pierce County's Sprinker Parking Lot LID project included two types of porous pavement and the City of Poulsbo's Mesford Pervious Sidewalk and Parking Lane project evaluated three types of porous pavement.

Unit Costs

Table 19 summarizes the minimum, average, and maximum costs for each porous pavement component.

Unit costs currently in the SUSTAIN BMP cost database that were not provided during the Puget Sound BMP cost database data gathering effort include:

- Grading/finishing (SF)
- Observation Well

n: number of facilities
CF: cubic feet
SF: square feet

Total Porous Pavement Cost

Table 20 summarizes the minimum, average, and maximum construction and O&M costs for porous pavement as a function of surface area (cost per square foot). Construction costs were calculated based on the unit cost information presented in Table 19 (when bid tabs and quantities were available) and jurisdictional "per square foot" costs (when provided). Note that these unit area facility costs do not necessarily reflect all associated construction costs because costs such as mobilization, temporary erosion and sediment control, and traffic control, were not included in the cost database. Design costs are presented in Table 20 as a percentage of the corresponding construction cost. Design costs were calculated based on jurisdiction submittals and projects where both design and construction costs were provided.

Table 20. Porous pavement project cost information.

BMP Component	Unit	n	Cost/Percentage			Currently in SUSTAIN?
			Low	Average	High	
Porous Pavement	SF	15	$1.81	$14.41	$74.42	No
O&M	SF	1	$0.02	$0.02	$0.02	No
Design [a]	%	3	10%	63%	90%	No

[a] Design costs are presented as a percentage of construction costs.
n: number of facilities
SF: square feet

Rain Barrel

Rain barrels are 50- to 60-gallon polyethylene storage containers that are used for water storage and reuse, typically in a residential land use setting.

Projects and Products

Table 21 summarizes information related to rain barrels. Cost information for 43 rain barrels from 2 cities and 16 vendors was gathered for the Puget Sound BMP cost database.

Table 21. Rain barrel project and product information.

Total Rain Barrel Cost

Table 22 summarizes the minimum, average, and maximum costs for rain barrels per unit. The City of Bellingham and City of Puyallup rain barrel costs included installation costs, but the rain barrel costs obtained from vendor websites did not include installation costs. Additional costs may also need to be added for shipping and tax.

Table 22. Rain barrel cost information.

BMP Component	Unit	n	Cost			Currently in SUSTAIN?
			Low	Average	High	
Connection/Use kit	Per Unit	1	$13.45	$13.45	$13.45	No
Gutter Connection	Per Unit	9	$2.59	$25.15	$31.04	Yes
Installation	Per Unit	2	$21.97	$25.99	$30.01	No
Rain Barrel	Per Unit	53	$25.35	$174.49	$361.10	Yes

n: number of products (multiple costs [low, mid range, and high] were included for some rain barrels)

Vegetated Filter Strip

Vegetated filter strips (i.e., buffer strips) are grassy areas with gentle slopes that treat stormwater runoff from adjacent paved areas before it becomes concentrated into a discrete channel.

Projects

Table 23 summarizes information related to vegetated filter strip facilities. Cost information for 2 vegetated filter strip installations in 1 city and for 1 WSDOT project was gathered for the Puget Sound BMP cost database. Both vegetated filter strip installations are compost-amended vegetated filter strips (CAVFS).

Table 23. Vegetated filter strip project information.

City/WSDOT	Project Name	Source
City of Redmond	SR 202 and NE 124th Street Intersection	Bid tabs
WSDOT	SR 18 Maple Valley to Issaquah Hobart Road	WSDOT website

Total Vegetated Filter Strip Cost

Table 24 summarizes the minimum, average, and maximum construction costs for vegetated filter strips a function of surface area (cost per square foot). Construction costs were provided with the submittals. Design costs were not broken out separately from the total costs. O&M costs for vegetated filter strips were not provided by the City of Redmond or WSDOT.

Table 24. Vegetated filter strip project cost information.

BMP Component	Unit	n	Cost			Currently in SUSTAIN?
			Low	Average	High	
Vegetated Filter Strip	SF	2	$1.17	$1.28	$1.40	No

n: number of facilities
SF: square feet

Unit costs currently in the SUSTAIN BMP cost database that were not provided during the Puget Sound BMP cost database data gathering effort include:

- Grading/finishing (SF)
- Grass (SF)

Other unit costs that were not provided during this cost gathering effort and are currently not included in the SUSTAIN BMP cost database, but may be incorporated into vegetated filter strip designs include:

- Excavation (CF) – necessary for topsoil installation
- Gravel (CF) – used in Ecology manual design as a flow spreader at the inlet
- Topsoil (CF) – design could include a soil/planting media component
- Compost (CF) – included for the CAVFS option
- Woody Shrubs (SF or per unit) – could be incorporated into a CAVFS design

Wet Pond

Wet ponds are facilities that contain permanent pools of water filled with the first flush runoff from a storm event. Wet ponds are designed to optimize water quality by providing retention time to settle out suspended solids (and associated pollutants) and to allow biologic activity to occur (to treat nutrients and organic pollutants).

Projects

Table 25 summarizes information related to wet pond facilities. Cost information for 25 wet ponds in 3 cities, 1 county, and WSDOT was gathered for the Puget Sound BMP cost database.

Table 25. Wet pond project information.

Unit Costs

Table 26 summarizes the minimum, average, and maximum costs for each wet pond component.

Unit costs currently in the SUSTAIN BMP cost database that were not provided during the Puget Sound BMP cost database data gathering effort include:

- Grading/finishing (SF)

Table 26. Wet pond unit cost information.

BMP Component	Unit	n	Cost			Currently in SUSTAIN?
			Low	Average	High	
Bird Exclusion Netting	Acre	1	$30,365	$30,365	$30,365	No
Debris Cage	Per Unit	1	$1,757	$1,757	$1,757	No
Dewatering	Constant	7	$10,545	$16,068	$21,089	No
Excavation	CF	4	$0.39	$1.01	$1.80	Yes
Grass	SF	5	$0.03	$0.33	$1.22	Yes
Gravel	CF	4	$1.03	$3.28	$6.97	Yes
Inlet Structure	Per Unit	1	$1,086	$1,086	$1,086	Yes
Outlet Structure	Per Unit	2	$2,550	$9,474	$16,397	Yes
Seal	SF	1	$0.79	$0.79	$0.79	Yes
Soil/Planting Media	CF	2	$0.42	$1.16	$1.89	No
Woody Shrubs	Per Unit	1	$23.08	$23.08	$23.08	No

n: number of facilities
CF: cubic feet
SF: square feet

Total Wet Pond Cost

Table 27 summarizes the minimum, average, and maximum construction and O&M costs for wet ponds as a function of volume (cost per cubic foot) or surface area (cost per square foot). Construction costs were calculated based on the unit cost information presented in Table 26 (when bid tabs and quantities were available) and jurisdictional "per square foot" costs (when provided). Note that these unit area facility costs do not necessarily reflect all associated construction costs because costs such as mobilization, temporary erosion and sediment control, and traffic control, were not included in the cost database. Design costs are presented in Table 27 as a percentage of the corresponding construction cost. Design costs were calculated based on jurisdictions submittals and projects where both design and construction costs were provided.

Table 27. Wet pond cost project information.

BMP Component	Unit	n	Cost/Percentage			Currently in SUSTAIN?
			Low	Average	High	
Wet Pond	CF	23	$1.26	$8.26	$40.86	No
	SF	1	$23.12	$23.12	$23.12	No
O&M	CF	1	$0.03	$0.03	$0.03	No
Design [a]	%	2	5%	12%	19%	No

[a] Design costs are presented as a percentage of construction costs.
n: number of facilities
CF: cubic feet
SF: square feet

Next Steps

The Puget Sound Stormwater BMP cost database was used in a pilot application of SUSTAIN in 2012 (Herrera 2012). However, Ecology also will evaluate options for periodic updates to the database if beneficial for other projects. Refer to the following website for additional information and updates: http://www.ecy.wa.gov/programs/eap/toxics/sustainmodeling.html.

Components_ID	Components_TXT	Components_Desc
2	Excavation	Using light equipment
3	Filter Fabric	Can be placed between gravel reservoir and underlying/overlying soil to reduce clogging of the reservoir void spaces
5	Grass	Sod
6	Gravel1	Porous pavement filter course, smaller particle sizes (1/2 - 1 1/2")
7	Gravel2	Porous pavement base (or reservoir) course, bedding around underdrain pipe in bioretention facilities, backfill for drywells and washed drain rock in infiltration trenches; slightly larger particle sizes, no fines (1 1/2" to 3")
8	Gravel3	Erosion control (rocks/rip-rap) used in constructed wetland and wet pond designs
9	Green Roof System	Total cost for the installed facility (per square foot)
10	Gutter Connection	Connection assembly
11	Inlet Structure	Used to direct piped inflow into facility
12	Mulch	Shredded hardwood
13	O&M	Approximate annual operation and maintenance costs (per square foot)
14	Observation Well	4” PVC pipe for monitoring water depth
15	Outlet Structure	Used to connect facility back into drainage system
16	Perennials	Assumes planting density of 1’ o.c. for 1 gallon plants
17	Porous Paving Material	Top course (specify asphalt, concrete, pavers, or open-celled grid)
18	Rain Barrel	50-60 gallon rain barrel
19	Seal	Bentonite (as opposed to geotextile)
20	Small Trees	Assumes planting densities of 15’ o.c.
21	Soil/Planting Media	Highly permeable soil mixed thoroughly with compost amendment
22	Underdrain Pipe	4” perforated PVC
23	Woody Shrubs	Assumes planting densities of 3’ o.c.
100	Bird Exclusion Netting	Polypropylene mesh netting for keeping birds out of wet ponds
101	Installation	Labor cost for rain barrel installation
102	Check Dam	A low, fixed structure (constructed of timber, loose rock, masonry, or concrete) used to control water flow in a bioswale or bioretention facility
103	Compost	Organic residue or a mixture of organic residues and soil
104	Constructed Wetland	Total cost for the installed facility (per square foot)
105	Debris Cage	Cage-like attachments (polyethylene or metal) used to prevent floating and particulate debris from clogging outlet control structures.
106	Design	Estimated cost to develop plans and specifications (per square foot)
107	Dewatering	Removal and control of ground water by pumping, drainage, or evaporation to allow construction activities to proceed
108	Emergents	Aquatic plants rooted below the water surface (or in an area that is periodically submerged) and extend above the water surface
109	Wet Pond	Total cost for the installed facility (per cubic foot)
110	Waterproof Membrane	PVC, Hypolan, rubber (EPDM), polyolifins (can be part of green roof design)
111	Screen	Prevents mosquitoes, leaves, and debris from entering cisterns and rain barrels
112	Connection/Use kit	Optional rain barrel components (includes overflow hose, splitter)
113	Drainage Layer	Aggregate and/or manufactured material (can be part of green roof design)
114	Drainage Sand	Sand installed below reservoir course (can be part of porous pavement design)
115	Cistern	Storage tank made out of fiberglass, concrete, polyethylene, metal, wood, etc. Total cost for the installed facility (per cubic foot)
116	Infiltration Trench	Total cost for the installed facility (per square foot)
117	Bioretention	Total cost for the installed facility (per square foot)
119	Root Barrier	Dense inorganic material (polyethylene, EPDM, filter fabric) that inhibits root penetration (can be part of green roof design)
120	Vegetated Buffer Strip	Total cost for the installed facility (per square foot)
121	Ground Cover	Low-lying plants requiring minimal maintenance
122	Grassed Swale	Total cost for the installed facility (per square foot)
123	Grass Lined Rain Garden	Total cost for the installed facility (per square foot)
124	Streambed Cobbles	4" streambed cobbles
125	Porous Pavement	Total cost for the installed facility (per square foot)

Bioretention

Bioretention Cost Request Form

City/County/Company Name:	City of Auburn
Contact Name:	Jacob Sweeting
Contact Email:	jsweeting@auburnwa.gov
Contact Phone:	253-804-5059

Project Information

Project Name:	West Valley Highway Improvements
Project Type (Public or Private):	Public
Construction Date(s):	2011
Total Project Cost:	$73,579 (total bioretention swale cost)
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed):

Bioretention swale = 690 LF (7.5 SF cross-sectional area)

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Compost	cubic feet		
Excavation	cubic feet	$1.11	Ditch excavation, including haul
Filter Fabric (if used)	square feet	$0.87	
Grading/finishing	square feet		
Grass	square feet	$1.11	Lawn sod
Gravel (if used)	cubic feet	$2.14	Pea gravel, assumes 1 ton = 1.3 CY
Inlet Structure (if used)	per unit		
Mulch (if used)	cubic feet		
Outlet Structure (if used)	per unit		
Perennials	square feet		
Small Trees (if used)	square feet		
Soil/Planting Media	cubic feet	$1.67	
Underdrain Pipe (if used)	feet	$40	8-inch diameter
Woody Shrubs (if used)	square feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Bioretention	square feet	$21.33	690' length, assumes 5' width
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Excavation - $30/CY
Filter Fabric - $7.80/SY
Grass - $10/SY
Gravel - $75/TN
Soil - $45/CY

Project Information

Project Name:	Bloedel Donovan Park
Project Type (Public or Private):	Public
Construction Date(s):	2003
Total Project Cost:	$12,820
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed):

Bloedel Donovan Park has a heavily used parking lot that drains into Lake Whatcom. The City retrofitted a 550-square-foot section in the parking lot near the catch basin with a rain garden to reduce runoff into the lake. The rain garden treats runoff from about 80 parking spaces and two parking lanes.

Source: Reining in the Rain (Bellingham and PSAT 2004)

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Compost	cubic feet		
Excavation	cubic feet		
Filter Fabric (if used)	square feet		
Grading/finishing	square feet		
Grass	square feet		
Gravel (if used)	cubic feet		Approx. 18 inches of drain rock
Inlet Structure (if used)	per unit		
Mulch (if used)	cubic feet		
Outlet Structure (if used)	per unit		
Perennials	square feet		
Small Trees (if used)	square feet		
Soil/Planting Media	cubic feet		Amended an 18- to 24-inch layer of sand with 20 to 25% organic material
Underdrain Pipe (if used)	feet		
Woody Shrubs (if used)	square feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Bioretention	square feet	$23.30	550 sf rain garden
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

The cost of the rain garden retrofit at Bloedel Donovan Park (2003):
Labor: $3,600
Vehicle use: $1,900
1 ½ day excavator rental: $500
Washed rock: $805
* Amended soil: $1,650
PVC/grates/catch basins/fabric/other misc: $1,000
Concrete: $1,200
Asphalt: $1,200
Debris removal: $300
Plants: $400
WCC crew planting time: $265
TOTAL: $12,820
*soil mixed with compost

Project Information

Project Name:	City Hall
Project Type (Public or Private):	Public
Construction Date(s):	2003
Total Project Cost:	$5,600
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed):

At the Bellingham City Hall, City workers converted three of the 60 spaces in the parking lot into a rain garden.

Source: Reining in the Rain (Bellingham and PSAT 2004)

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Compost	cubic feet		
Excavation	cubic feet		
Filter Fabric (if used)	square feet		
Grading/finishing	square feet		
Grass	square feet		
Gravel (if used)	cubic feet		
Inlet Structure (if used)	per unit		
Mulch (if used)	cubic feet		
Outlet Structure (if used)	per unit		
Perennials	square feet		
Small Trees (if used)	square feet		
Soil/Planting Media	cubic feet		
Underdrain Pipe (if used)	feet		
Woody Shrubs (if used)	square feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Bioretention	square feet	$18.67	300 sf rain garden
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Bioretention Cost Request Form

City/County/Company Name:	City of Bellingham
Contact Name:	William M. Reilly
Contact Email:	wreilly@cob.org
Contact Phone:	360-778-7955

Project Information

Project Name:	EV-71 Flynn Street Water Quality
Project Type (Public or Private):	Public
Construction Date(s):	2010 (June - September)
Total Project Cost:	$120,700
Funding Source (if Public Project):	Storm and Surface Water Utility

Brief Project Description (include number and types of BMPs installed):

Project was reforestation of right of way with all street water running into simulated forest duff layer acting as bioretention. Project was to capture all water and absorb and release water to ground. Special design to limit phosphorus runoff to phosphorus limited water body (Lake Whatcom). Provides treatment for approx. 1,600 lf of roadway

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Compost	cubic feet		
Excavation	cubic feet		
Filter Fabric (if used)	square feet	$0.37	70 SY used
Grading/finishing	square feet		
Grass	square feet		
Gravel (if used)	cubic feet	$2.42	80 tons cobble and crsrd @ $36.30/ton
Inlet Structure (if used)	per unit		
Mulch (if used)	cubic feet	$0.64	1,500 CY of Hog Fuel
Outlet Structure (if used)	per unit		
Perennials	square feet		
Small Trees (if used)	square feet		
Soil/Planting Media	cubic feet		
Underdrain Pipe (if used)	feet		
Woody Shrubs (if used)	square feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Bioretention	square feet	$4.12	29,274 sf planted retrofit area
Design	square feet	$0.51	29,274 sf planted retrofit area
Annual O&M (if known)	square feet		Low

Additional Notes or Information

This may be called a bioretention area but it is generally encapsulating both sides of the roadway within a buffer of mulch and plantings 20 feet wide in one direction and 30 feet wide in the other direction with a 30 foot wide street. This roadway had the added benefit of having no driveways in the treatment section area. NOTE: calculations above for design include survey, CAD, and engineering. This is a special design to capture all water into mulch beds for infiltration. Design is to prevent phosphorus discharge. Hog fuel was used due to its low soluble reactive phosphorus content while still providing soil rhizomes.

Project Information

Project Name:	Sprinker Parking Lot LID - Phase 2
Project Type (Public or Private):	Public
Construction Date(s):	2010
Total Project Cost:	$1.25 million ($1.7 million for Phase 1 and 2)
Funding Source (if Public Project):	$1 million Department of Ecology LID grant ($115,000 grant for Phase 1)

Brief Project Description (include number and types of BMPs installed):

90,500 sf of impervious area converted to 48,500 sf porous concrete and 42,000 sf porous asphalt (Phase 1 and 2)
12,200 sf of impervious area converted to 3 bioretention areas (~ 600 plants)
305 sf recycled rubber sidewalk

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Compost	cubic feet		
Excavation	cubic feet	$0.43	Parking lot excavation, including haul
Filter Fabric (if used)	square feet		
Grading/finishing	square feet		
Grass	square feet		
Gravel (if used)	cubic feet		
Inlet Structure (if used)	per unit		
Mulch (if used)	cubic feet	$1.42	Bark or wood chip mulch
Outlet Structure (if used)	per unit		
Perennials	each	$7	
Small Trees (if used)	each	$20	
Soil/Planting Media	cubic feet	$1.63	Bioretention soil mix
Underdrain Pipe (if used)	feet		
Woody Shrubs (if used)	each	$7, 17.50, 410	Low, mid, high cost

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Bioretention	square feet	$5.91	8,500 sf, includes excavation, soil, mulch, and plants
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Excavation - $11.60/CY
Mulch - $38.45/CY
Bioretention soil mix = $44/CY

Project Name:	Anthony's Parking Lot
Project Type (Public or Private):	Public
Construction Date(s):	2010
Total Project Cost:	$285,238 (total project cost)
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed):

Anthony's parking lot (58,000 sf)

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Compost	cubic feet		
Excavation	cubic feet		
Filter Fabric (if used)	square feet		
Grading/finishing	square feet		
Grass	square feet		
Gravel (if used)	cubic feet		
Inlet Structure (if used)	per unit		
Mulch (if used)	cubic feet		
Outlet Structure (if used)	per unit		
Perennials	square feet		
Small Trees (if used)	square feet		
Soil/Planting Media	cubic feet		
Underdrain Pipe (if used)	feet		
Woody Shrubs (if used)	square feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Bioretention	square feet	$44.47	Assumes 2,700 sf bioret. (inc. grading, landscaping, irrigation)
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Storm Drain: $51,519, includes 2 Filterra Units, catch basin, and other underground storm drain piping
Grading and Bioretention: $85,885, included the rain garden work
Paving and Concrete: $113,660
Landscaping and Irrigation: $34,174, includes plantings for the rain gardens

Grass	square feet		
Gravel (if used)	cubic feet		
Inlet Structure (if used)	per unit		
Mulch (if used)	cubic feet		
Outlet Structure (if used)	per unit		
Perennials	square feet		
Small Trees (if used)	square feet		
Soil/Planting Media	cubic feet		
Underdrain Pipe (if used)	feet		
Woody Shrubs (if used)	square feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Bioretention	square feet	$34.12, 83.52	Low (rain gardens only), high (rain gardens & artistic watering can downspouts)
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Pervious paving - $174,000
Rain Gardens (4) – $29,000
Watering cans and downspouts (4) – $42,000.

Contact Email:	jgroh@cityofpoulsbo.com
Contact Phone:	360.779.4078

Project Information

Project Name:	Caldart Ave. Improvements Project
Project Type (Public or Private):	Public
Construction Date(s):	2006
Total Project Cost:	Approx. $1 million
Funding Source (if Public Project):	$263,000 Department of Ecology LID Grant

Brief Project Description (include number and types of BMPs installed):

The purpose of the 2006 Caldart Ave. Improvements Project was to improve traffic and pedestrian safety on a 1/3 mile segment of Caldart Avenue in Poulsbo. Several LID elements were included in the project design - they consist of approximately 2,200 feet of new 5 feet wide porous concrete sidewalks, 800 feet of bioretention swales, and a traffic island bioretention cell. ACE Paving Co., of Bremerton, WA installed all of the LID elements including both the pervious concrete sidewalks and bioretention cells.

$8,000 total for 2 bioretention swales.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Compost	cubic feet		
Excavation	cubic feet		
Filter Fabric (if used)	square feet		
Grading/finishing	square feet		
Grass	square feet		
Gravel (if used)	cubic feet		
Inlet Structure (if used)	per unit		
Mulch (if used)	cubic feet		
Outlet Structure (if used)	per unit		
Perennials	square feet		
Small Trees (if used)	square feet		
Soil/Planting Media	cubic feet		
Underdrain Pipe (if used)	feet		
Woody Shrubs (if used)	square feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Bioretention	square feet	$5.00	Assumes 800 ft bioretention swale length, 2 ft bottom width
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Bioretention Cost Request Form

City/County/Company Name:	City of Puyallup
Contact Name:	Joy Rodriguez
Contact Email:	jrodriguez@ci.puyallup.wa.us
Contact Phone:	253-841-5549

Project Information

Project Name:	Puyallup's 2011 Rain Garden Program
Project Type (Public or Private):	Public
Construction Date(s):	2011 (May, July, and Sept.)
Total Project Cost:	$53,300
Funding Source (if Public Project):	Department of Ecology Capacity Grant

Brief Project Description (include number and types of BMPs installed):

The 2011 Rain Garden Program included three installations with rain garden, rain barrel, and riparian planting elements. A total of 19 rain gardens, 8 rain barrels, and 1 riparian planting were installed during this project. The total project cost above includes all elements, design, landscape contractor (no-cost donation for 2 of the 3 installations), materials and related event items.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Compost	cubic feet	$0.89	Cost provided is per CF, however pricing is based on CY (industry std.)
Excavation	cubic feet		
Filter Fabric (if used)	square feet		
Grading/finishing	square feet		
Grass	square feet		
Gravel (if used)	cubic feet	$0.91	Cost provided is per CF, however pricing is based on CY (industry std.)
Inlet Structure (if used)	per unit		
Mulch (if used)	cubic feet	$0.74	Cost provided is per CF, however pricing is based on CY (industry std.)
Outlet Structure (if used)	per unit		
Perennials	square feet	$3.81	Cost determined by total project plant cost/total rain garden area
Small Trees (if used)	square feet		
Soil/Planting Media	cubic feet	$0.74	Cost provided is per CF, however pricing is based on CY (industry std.)
Underdrain Pipe (if used)	feet		
Woody Shrubs (if used)	square feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Bioretention	square feet	$13.40	Includes materials, plants, landscape contractor
Design	square feet	$21.32	Includes design, specs, project mgt
Annual O&M (if known)	square feet		

Additional Notes or Information

Project Information

Project Name:	185th Ave NE Extension
Project Type (Public or Private):	Public
Construction Date(s):	2011
Total Project Cost:	$747,168 (includes monitoring); $33,576 design cost; $513,301 construction and CM
Funding Source (if Public Project):	$500,000 Department of Ecology LID grant

Brief Project Description (include number and types of BMPs installed):

Green stormwater infrastructure (570 feet long x 10 feet wide [top] bioretention swale and 6,840 square feet of porous concrete sidewalk) as part of the 185th Avenue NE Extension project.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Compost	cubic feet		
Excavation	cubic feet	$0.19	Based on $5/CY
Filter Fabric (if used)	square feet	$1.11	
Grading/finishing	square feet		
Grass	square feet	$0.16	
Gravel (if used)	cubic feet	$1.69	Gravel backfill around underdrain
Inlet Structure (if used)	per unit		
Mulch (if used)	cubic feet	$1.00	Bark or wood chip mulch
Outlet Structure (if used)	per unit		
Perennials	each	$9.75	165 installed for project
Small Trees (if used)	each	$13.50, 215	Low cost (for 85 trees), high cost (for 21 trees)
Soil/Planting Media	cubic feet	$1.35	
Underdrain Pipe (if used)	feet	$9.75	6- or 8-inch pipe
Woody Shrubs (if used)	each	$10	Average shrub cost (967 installed for project)
Check dam	each	$150	12 installed for project

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Bioretention	square feet	$8.16	Approx. cost per SF, inc. excavation, plantings, soil, mulch, check dams
Design	square feet	$3	50% of design cost, assumes 10 foot width
Annual O&M (if known)	square feet		

Additional Notes or Information

Bioretention soil = $36.50/CY
Mulch = $27/CY
Gravel backfill around underdrain = $46.50/CY
Check dam = $150 each
Geomembrane = $10/SY

Project Information

Project Name:	SR202 and NE 124th St. Intersection
Project Type (Public or Private):	Public
Construction Date(s):	2011
Total Project Cost:	$3M (all project components)
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed):

3,440 sf (430 ft x 8 ft) bioretention swale
3,770 sf (290 ft x 13 ft) compost-amended filter strips

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Compost	cubic feet	$1.13	
Excavation	cubic feet		
Filter Fabric (if used)	square feet		
Grading/finishing	square feet		
Grass	square feet	$0.02	
Gravel (if used)	cubic feet		
Inlet Structure (if used)	per unit	$7,500	Type 2 CB (48-inch diam) with flow splitter
Mulch (if used)	cubic feet	$1	
Outlet Structure (if used)	per unit	$12,000	Type 2 CB (48-inch diam) with control structure
Perennials	each	$1.60, 2.15, 6.35	Low, mid, high cost
Small Trees (if used)	each	$2.95, 6.35, 9.55	Low, mid, high cost
Soil/Planting Media	cubic feet		
Underdrain Pipe (if used)	feet	$22	6-inch pipe
Woody Shrubs (if used)	each	$6.35	

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Bioretention	square feet	$42.51	3,440 sf bioretention swale, inc. planting cost
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Bioretention swale = $35,260 ($82/LF, 430 LF total)
Mulch = $28/CY
Compost = $30.45/CY
Total planting cost (including mulch and compost) = $110,990

Project Information

Project Name:	Silver Creek Basin LID Retrofits (Projects 6A and 7A)
Project Type (Public or Private):	Public
Construction Date(s):	2010
Total Project Cost:	NA
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed):

Project 6A = 2 rain gardens (approx. 305 sf each)
Project 7A = 1 rain garden (approx. 830 sf)
Costs from engineer's construction cost estimate (100% design)

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Compost	cubic feet		
Excavation	cubic feet	$1.48	Structure excavation Class B, does not inc. haul and disposal
Filter Fabric (if used)	square feet	$0.90	30 mil, black PVC liner; includes installation
Grading/finishing	square feet		
Grass	square feet		
Gravel (if used)	cubic feet	$1.85	Mineral aggregate, Type 26
Inlet Structure (if used)	per unit		
Mulch (if used)	cubic feet	$1.85	Bark mulch
Outlet Structure (if used)	per unit		
Perennials	square feet		
Small Trees (if used)	square feet		
Soil/Planting Media	cubic feet	$2.03	Bioretention soil
Underdrain Pipe (if used)	feet		
Woody Shrubs (if used)	square feet	$3.73, 5.40	Low (Project 7A) to high cost (Project 6A), includes all plantings
Observation Well	each	$200	Material price quote from HD Fowler, inc. 30% labor
Streambed Cobbles	cubic feet	$7.41	4" streambed cobbles

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Bioretention	square feet	$36, 49	Low (Project 7A) to high cost (Project 6A)
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Bioretention soil = $55/CY
Bark mulch = $50/CY
Mineral aggregate, Type 26 = $50/CY
Streambed cobbles = $200/CY
Excavation (Structure, Class B) = $40/CY
Planting costs = $3,300 (Project 6A), $3,100 (Project 7A)

Project Information

Project Name:	Ballard Roadside Rain Gardens
Project Type (Public or Private):	Public
Construction Date(s):	2009
Total Project Cost:	$1.8 million
Funding Source (if Public Project):	Partial Federal Recovery Act funding

Brief Project Description (include number and types of BMPs installed):

Approx. 32,994 sf of rain gardens installed
Costs based on bid tabs and plan sheets posted on project website:
www.seattle.gov/util/Services/Drainage_&_Sewer/Keep_Water_Safe_&_Clean/CSO/CSOReductionProjects/BallardBasin/BallardRoadsideRaingardens

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Compost	cubic feet	$1.53	
Excavation	cubic feet	$0.76	
Filter Fabric (if used)	square feet		
Grading/finishing	square feet		
Grass	square feet		
Gravel (if used)	cubic feet		
Inlet Structure (if used)	per unit		
Mulch (if used)	cubic feet	$1.67	
Outlet Structure (if used)	per unit		
Perennials	square feet		
Small Trees (if used)	each	$85, 100	Low (coniferous), high (deciduous)
Soil/Planting Media	cubic feet	$1.36, 1.48	Low (landscape mix), high (turf mix)
Underdrain Pipe (if used)	feet		
Woody Shrubs (if used)	each	$7	1,371 shrubs total
Ground Cover	each	$3, 7	Low (4" pot), high (1 gallon)
Emergents	each	$2.45	

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Bioretention	square feet	$44	Construction cost
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Excavation = $20.65/CY
Bioretention Soil = $36.80/CY (landscape mix) - $40/CY (turf mix)
Compost = $41.25/CY
Mulch = $45/CY
$44/SF cost from Life-cycle cost of Green Stormwater Infrastructure for the CSO LTCP

Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed):

660 LF x 20 feet wide bioretention swales

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Compost	cubic feet	$0.52	
Excavation	cubic feet	$0.81	Common excavation
Filter Fabric (if used)	square feet	$0.22	
Grading/finishing	square feet		
Grass	square feet	$1.00	Sodding
Gravel (if used)	cubic feet	$2.41	Quarry spalls, assumes 1.3 TN/CY
Inlet Structure (if used)	per unit	$1,100	Inlet Type 250A
Mulch (if used)	cubic feet	$1.11	Shredded bark mulch
Outlet Structure (if used)	per unit	$2,200	CB Type 240 A & B
Perennials	square feet		
Small Trees (if used)	square feet		
Soil/Planting Media	cubic feet	$1.11	Bioretention soil
Underdrain Pipe (if used)	feet		
Woody Shrubs (if used)	square feet	$1.74	Average cost per SF for trees and shrubs

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Bioretention	square feet	$11.77, 23.29	Low (does not inc. paving), high (inc. paving), based on 13,200 sf, inc. drainage and landscaping
Design	square feet		
Annual O&M (if known)	square feet	$1.90, 2.20, 2.60	Low, average, high costs for O&M by SCC

Additional Notes or Information

Excavation (common) = $22/CY
Bioretention soil = $30/CY
Compost material = $14/CY
Shredded bark mulch = $30/CY
Streambed cobbles = $75/TN
Quarry spalls = $50/TN

O&M Source: Life-cycle cost of Green Stormwater Infrastructure for the CSO LTCP
From 2006 to 2009, the three years after completion of Pinehurst, Seattle Conservation Corp (SCC) was contracted to water, weed, replace plants and mulch sixteen blocks of NDS. The three years of maintenance for the 70,000 square feet of landscaped area at Pinehurst averaged $2.20/square foot. The annual average costs ranged from $1.90 to $2.60 per square foot.

Total Project Cost:	$850,000
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed):

Seattle's pilot Street Edge Alternatives Project (SEA Streets).
Reduced impervious surfaces to 11 percent less than a traditional street, provided surface detention in swales, and added over 100 evergreen trees and 1100 shrubs.
This included an extensive design and communications budget due to the need to work closely with residents on the design. Future projects will cost less than traditional street

Contact Phone: 301-253-8855

Project Information

Project Name: Complete Cistern
Project Type (Public or Private):
Construction Date(s): 2011
Total Project Cost:
Funding Source (if Public Project):

Brief Project Description (include number of cisterns, storage volume, and material [fiberglass, polyethylene, etc.]):

Complete Cistern (214-gallon polyethylene) includes Submersible Pump, Downspout Debris Filter, Downspout to Tank Flex-Hose, Spigot, Access Cover, Drain Plug, and Overflow Port

66" long x 22" wide x 45" high

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Cistern	per unit	$1,001	214 gallons
Gutter Connection	per unit		
Screen	per unit		
Water Treatment System	per unit		
Downspout Filter	per unit		Included with unit

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Cistern	cubic feet	$35	214 gallons
Design	cubic feet		
Annual O&M (if known)	cubic feet		

Additional Notes or Information

214 gallon (29 cubic feet) = $1001 ($35/cf)

Project Information

Project Name:	Water Wall
Project Type (Public or Private):	
Construction Date(s):	2011
Total Project Cost:	
Funding Source (if Public Project):	

Brief Project Description (include number of cisterns, storage volume, and material [fiberglass, polyethylene, etc.]):

650 Gallon Waterwall Fatboy Rainwater Collection Tank
Inlet: A 12" mosquito proof leaf strainer supplied with the tank can be placed in any of three inlet positions on the top.
Overflow: A 3" flanged overflow outlet is provided, including rubber seal and screws for installing. There are overflow positions on either end of the tank.
Outlets: Two brass threaded 1" tap outlets - one in each end and one low on the front of the tank - plus one 3/4" tap outlet at knee height on the front of the tank.
Footing: A level, solid base is all that is required for Waterwall Fatboy such as cement pavers or a contained sand base.
Material: High density polyethylene, UV stabilised, FEA approved for holding potable water

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Cistern	per unit	$1,100	650 gallons
Gutter Connection	per unit		
Screen	per unit		
Water Treatment System	per unit		
Downspout Filter	per unit		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Cistern	cubic feet	$13	650 gallons
Design	cubic feet		
Annual O&M (if known)	cubic feet		

Additional Notes or Information

Cistern Cost Request Form

City/County/Company Name:	Seattle Public Utilities
Contact Name:	Emiko Takahashi
Contact Email:	emiko.takahashi@seattle.gov
Contact Phone:	(206) 615-1695

Project Information

Project Name:	Rainwise
Project Type (Public or Private):	Private
Construction Date(s):	2010
Total Project Cost:	NA
Funding Source (if Public Project):	Public (incentives for private installations)

Brief Project Description (include number of cisterns, storage volume, and material [fiberglass, polyethylene, etc.]):

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Cistern	per unit		
Gutter Connection	per unit		
Screen	per unit		
Water Treatment System	per unit		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Cistern	square feet	$2.60	Construction incentive cost per SF, inc. O&M
Design	cubic feet		
Annual O&M (if known)	cubic feet		

Additional Notes or Information

Source: Life-cycle cost of Green Stormwater Infrastructure for the CSO LTCP

Cistern cost above does not include:
- Soft cost ($1.51/sf) for SPU to coordinate public outreach, inspections, acquires funding for the incentives, reports on program progress and conducts contractor trainings
- Replacement cost (2% or $5.39/sf)

Cistern cost does include:
- O&M performed by the homeowner. The incentive includes the present value cost of future maintenance done by residents. Cisterns will require periodic inspections and filter cleanings during the rainy months.

Constructed Wetlands

Constructed Wetland Cost Request Form

City/County/Company Name:	City of Arlington
Contact Name:	Eric Scott
Contact Email:	EScott@arlingtonwa.gov
Contact Phone:	360-403-3512

Project Information

Project Name:	Arlington Constructed Stormwater Wetland
Project Type (Public or Private):	Public
Construction Date(s):	2011
Total Project Cost:	$649,881 (estimated based on grant + 25% match)
Funding Source (if Public Project):	$519,905 Department of Ecology stormwater grant

Brief Project Description (include number and types of BMPs installed):

8.7 acre wetland project had a bid price of $770,000.

The City's largest stormwater outfall, draining 284 acres of Old Town Arlington, discharges into the Stillaguamish River. The constructed stormwater wetland will provide a natural treatment system to capture and remove nutrients and provide flood detention and storage capacity.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Excavation	cubic feet		
Grading/finishing	square feet		
Grass	square feet		
Gravel	cubic feet		
Inlet Structure	per unit		
Mulch (if used)	cubic feet		
Outlet Structure	per unit		
Perennials	square feet		
Soil/Planting Media	cubic feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Constructed Wetland	square feet	$2.03	8.7-acre wetland
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Constructed Wetland Cost Request Form

City/County/Company Name:	City of Bellingham
Contact Name:	William M. Reilly
Contact Email:	wreilly@cob.org
Contact Phone:	360-778-7955

Project Information

Project Name:	Brentwood Rock Plant Filter Retrofit
Project Type (Public or Private):	Public
Construction Date(s):	2010 (June - September)
Total Project Cost:	$155,749
Funding Source (if Public Project):	SSWU

Brief Project Description (include number and types of BMPs installed):

Existing wet pond reconstructed into a rock plant filter (closest relation constructed wetland). Cost fairly indicative of new construction except no property cost. Rock Plant Filter is typically a design used in tertiary treatment for wastewater. Being used as a phosphorus limiting BMP.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Excavation	cubic feet		
Grading/finishing	square feet		
Grass	square feet		
Gravel	cubic feet		
Inlet Structure	per unit		
Mulch (if used)	cubic feet		
Outlet Structure	per unit		
Perennials	square feet	$1.71	Lump sum plantings $28,200
Soil/Planting Media	cubic feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Constructed Wetland	square feet	$9.42	16,500 sf rock plant filter
Design	square feet	$1.30	$21,433 total, 16,500 sf rock plant filter
Annual O&M (if known)	square feet		

Additional Notes or Information

Lump sum for items makes discrimination difficult.

Project Information

Project Name:	Eliza Avenue Improvements, ES-0126
Project Type (Public or Private):	Public
Construction Date(s):	2007
Total Project Cost:	$133,977 (Constructed wetland costs only)
Funding Source (if Public Project):	SSWU

Brief Project Description (include number and types of BMPs installed):

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Excavation	cubic feet		
Grading/finishing	square feet		
Grass	square feet		
Gravel	cubic feet		
Inlet Structure	per unit		
Mulch (if used)	cubic feet		
Outlet Structure	per unit	$4,730	
Perennials	square feet	$1.29	Lump sum $20,000 vegetation
Soil/Planting Media	cubic feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Constructed Wetland	square feet	$8.62	15,533 sf
Design	square feet	$2.78	$43,200 total, 15,533 sf
Annual O&M (if known)	square feet		

Additional Notes or Information

Constructed Wetland Cost Request Form

City/County/Company Name:	City of Redmond
Contact Name:	Andy Rheaume
Contact Email:	AJRHEAUME@redmond.gov
Contact Phone:	425-556-2741

Project Information

Project Name:	Bear Creek Park WQ Facility
Project Type (Public or Private):	Public
Construction Date(s):	2011
Total Project Cost:	$442,127
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed):

This project includes construction of a stormwater wetland (4,400 sf) and associated piping and planting; construction of a concrete block retaining wall; stream buffer mitigation; tree replacement, installation of short soft-surface interpretative trail; and replacement of asphalt pedestrian/biking trail with porous pavement (7,800 sf).

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Excavation	cubic feet	$0.74	Pond excavation
Grading/finishing	square feet		
Grass	square feet		
Gravel	cubic feet		
Inlet Structure	per unit	$2,180	Catch basin, Type 2 54" diameter
Mulch (if used)	cubic feet		
Outlet Structure	per unit	$7,025	Rectangular vault (5'4" x 9'4" x 4'8")
Perennials	each	$2.75	
Soil/Planting Media	cubic feet	$0.55	Topsoil, Type A
Seal	square feet	$1.37	Geosynthetic clay liner and penetration
Woody Shrubs	each	$9, 14	Low, high cost
Small Trees	each	$28, 100, 225	Low, mid, high costs

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Constructed Wetland	square feet	$12.47	4,400 sf wetland, inc. excavation, inlet/outlet structures, plantings, liner
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Pond excavation = $19.90/CY
Topsoil, Type A = $14.75/CY
2 inlet structures and 2 outlet structures used for wetland
Total planting cost = $16,922

Grassed Swales

Grassed (Vegetated) Swale Cost Request Form

City/County/Company Name:	WSDOT
Contact Name:	Mark Maurer
Contact Email:	MaurerM@wsdot.wa.gov
Contact Phone:	(360) 705-7260

Project Information

Project Name:	SR 518 Compost-Amended Biofiltration Swale
Project Type (Public or Private):	Public
Construction Date(s):	2008
Total Project Cost:	$30,000 (2 bioswales, inc. components to facilitate monitoring that are not inc. in cost/SF)
Funding Source (if Public Project):	

Brief Project Description (include number and types of BMPs installed):

100-foot long compost-amended biofiltration swale = approximately $2,800 ($4.30 per square foot)
The costs for the SR 518 site included:
- Layout, removing asphalt lined ditch, reshaping ditch, earthwork (a small excavator with a blade was used and cut and fill were balanced), fine grading (small hand tool work), compost blanket, inlet pipe (trenching, curb cuts and concrete work at inlet, pipe costs, pipe placement and cover, and splash protection at pipe outlet), hydroseeding (including seed and mulch)
- No outlet catch basin or piping was installed since there was already a catch basin located downstream of the biofiltration swales.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet		
Grading/finishing	square feet		
Grass	square feet		
Inlet Structure (if used)	per unit		
Outlet Structure (if used)	per unit		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Grassed Swale	square feet	$4.30	Compost-amended bioswale
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Project Type (Public or Private):	Public
Construction Date(s):	2008
Total Project Cost:	$30,000 (2 bioswales, inc. components to facilitate monitoring that are not inc. in cost/SF)
Funding Source (if Public Project):	

Brief Project Description (include number and types of BMPs installed):

100-foot long standard biofiltration swale = approximately $2,500 ($3.80 per square foot).
The costs for the SR 518 site included:
- Layout, removing asphalt lined ditch, reshaping ditch, earthwork (a small excavator with a blade was used and cut and fill were balanced), fine grading (small hand tool work), inlet pipe (trenching, curb cuts and concrete work at inlet, pipe costs, pipe placement and cover, and splash protection at pipe outlet), hydroseeding (including seed, fertilizer, and mulch)
- No outlet catch basin or piping was installed since there was already a catch basin located downstream of the biofiltration swales.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet		
Grading/finishing	square feet		
Grass	square feet		
Inlet Structure (if used)	per unit		
Outlet Structure (if used)	per unit		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Grassed Swale	square feet	$3.80	Standard bioswale
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Project Information

Project Name:	Freeway Drive Improvements Phase II
Project Type (Public or Private):	Public
Construction Date(s):	July - August 2011
Total Project Cost:	$900,000
Funding Source (if Public Project):	City and Transportation Improvement Board

Brief Project Description (include number and types of BMPs installed):

To improve Freeway Drive from College way to Steward Road and to add sidewalks in some areas. This included grass lined rain gardens that would be able to treat the water quality event.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet	0.29	$7.95 per CY including haul
Grading/finishing	square feet	NA	Not noted in the bid items
Grass	square feet	0.84	$7.60 per SY
Inlet Structure (if used)	per unit	NA	
Outlet Structure (if used)	per unit	2210	Catch Basin Type 2, 48-inch
Underdrain Pipe	LF	29.7	Underdrain pipe 12-inch diameter

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Grass Lined Rain Garden	square feet	9.1	$4,550 for entire facility
Design	square feet	4.66	Very rough estimate
Annual O&M (if known)	square feet	0.47	Estimated on mowing (0.07) & Vactor (0.40)

Annual O&M (if known)	square feet		

Additional Notes or Information

http://www.greenroofs.org/boston/index.php?page=ballardwin
Architect = Bohlin Cywinski Jackson
Landscape Architect = Swift & Co.
Green Roof Consultant = Rana Creek Habitat & Restoration
Builder = PCL Construction Services

Waterproofing membrane, insulation, and drainage/moisture retention elements (part of a Garden Roof® Assembly) supplied by American Hydrotech, Inc. Seamless waterproofing membrane = Monolithic Membrane 6125®EV-FR (fabric reinforced, environmental grade, 25% recycled content). Water retention/drainage/aeration element = lightweight panels of 100% recycled polyethylene, molded into retention cups and drainage channels.

Strom water runoff is filtered through the planted roof or absorbed by the site landscape. Water usage on the roof and throughout the building is conserved through devices such as a computer controlled irrigation system, low flow fixtures, sensor and timed faucets, and waterless urinals.

The roof top planting is a mix of self-sustaining, drought tolerant, indigenous grasses and sedums. While regular roof maintenance is required, the green roof was designed with mainly fescue and sedum type plants, which minimize any additional maintenance requirements.

4-to-6 inches of growing medium is used and the mix was a custom blend based on German FLL standards. It was blown onto the roof and a biodegradable coconut fiber mat helps the plants during the establishment period by reducing wind and water erosion.

Green Roof Cost Request Form

City/County/Company Name:	Weston Solutions, Inc.
Contact Name:	Arnab Bhowmick
Contact Email:	Arnab.Bhowmick@westonsolutions.com
Contact Phone:	(206) 521-7694

Project Information

Project Name:	GreenGrid® Intensive Green Roof System
Project Type (Public or Private):	Both
Construction Date(s):	2011
Total Project Cost:	NA
Funding Source (if Public Project):	NA

Brief Project Description (include total green roof area, intensive or extensive design, soil media depth):

2'x2'x4" trays (approx. 1250) to cover 5000 sq ft.

Includes GreenGrid modules, growth media, plants (plugs planted on 6-inch on center), and a 2-ounce, non-woven geotextile root barrier lining the inside of each module.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Drainage Layer	square feet		
Grass	square feet		
Gravel (if used)	cubic feet		
Irrigation System (if used)	square feet		
Mulch	cubic feet		
Outlet Drain	per unit		
Perennials (if used)	square feet		
Root Barrier (if used)	square feet		
Small Trees (if used)	square feet		
Soil/Planting Media	cubic feet		
Waterproof Membrane	square feet		
Woody Shrubs (if used)	square feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Green Roof	square feet	$13.91	5000sf GreenGrid; inc. modules, growth media, plants, geotextile, and delivery; does not inc. tax
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Assumptions for this project are as follow:
- Sales tax is not included in the cost estimate.
- Building permits, if required, will be obtained by others.
- Roof live-load limits (saturated; approximately 40 lbs/sq.ft.) have been documented by others, and a determination has been made by others that the GreenGrid green roof system will not overload the structure.
- An irrigation system (if desired) will be provided by others.

Green Roof Cost Request Form

City/County/Company Name:	City of Mukilteo
Contact Name:	Jim Niggemyer
Contact Email:	jniggemyer@ci.mukilteo.wa.us
Contact Phone:	(425) 263-8081

Project Information

Project Name:	Mukilteo City Hall
Project Type (Public or Private):	Public
Construction Date(s):	2008
Total Project Cost:	$6.9 million total cost
Funding Source (if Public Project):	NA

Brief Project Description (include total green roof area, intensive or extensive design, soil media depth):

2,700 sf steep pitched roof

Project also included the following BMPs; however, the costs for these BMPs could not be broken out separately:

- Bioretention
- Grassed Swale
- Porous Pavement
- Wet Pond

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Drainage Layer	square feet		
Grass	square feet		
Gravel (if used)	cubic feet		
Irrigation System (if used)	square feet		
Mulch	cubic feet		
Outlet Drain	per unit		
Perennials (if used)	square feet		
Root Barrier (if used)	square feet		
Small Trees (if used)	square feet		
Soil/Planting Media	cubic feet		
Waterproof Membrane	square feet		
Woody Shrubs (if used)	square feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Green Roof	square feet	$10	2,700 sf, doesn't include supporting roof structure
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

The structure to support the roof was designed to support the green roof and is not included in this cost. This cost does not reflect the additional ongoing maintenance costs of this roof. The roof requires weeding and irrigation.

Funding Source (if Public Project):

Brief Project Description (include total green roof area, intensive or extensive design, soil media depth):

Certified Green Roof media (intensive, semi-intensive, and extensive)

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Drainage Layer	square feet		
Grass	square feet		
Gravel (if used)	cubic feet		
Irrigation System (if used)	square feet		
Mulch	cubic feet		
Outlet Drain	per unit		
Perennials (if used)	square feet		
Root Barrier (if used)	square feet		
Small Trees (if used)	square feet		
Soil/Planting Media	cubic feet	$3.30	Average cost for Rooflite media (2 CY super sacks); does not inc. trucking cost ($650)
Waterproof Membrane	square feet		
Woody Shrubs (if used)	square feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Green Roof	square feet		
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Rooflite extensive packaged in 2 yard super sacks - $90.40 per yard
Rooflite semi intensive packaged in 2 yard super sacks - $89.55 per yard
Rooflite intensive packaged in 2 yard super sacks - $88.95 per yard

Rooflite extensive bulk - $62.55 per yard
Rooflite semi intensive bulk - $61.70 per yard
Rooflite intensive bulk -$61.10 per yard

Trucking into Seattle – approximately $650 per truck

Project Information

Project Name:	Seattle Justice Center
Project Type (Public or Private):	Public
Construction Date(s):	2004
Total Project Cost:	$91,350,000 total cost (excluding land costs)
Funding Source (if Public Project):	NA

Brief Project Description (include total green roof area, intensive or extensive design, soil media depth):

Extensive green roof (8,500 sf), 6 inches of growing medium.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Drainage Layer	square feet		
Grass	square feet		
Gravel (if used)	cubic feet		
Irrigation System (if used)	square feet		
Mulch	cubic feet		
Outlet Drain	per unit		
Perennials (if used)	square feet		
Root Barrier (if used)	square feet		
Small Trees (if used)	square feet		
Soil/Planting Media	cubic feet		
Waterproof Membrane	square feet		
Woody Shrubs (if used)	square feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Green Roof	square feet	$19.25	8,500 sf total
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

http://www.greenroofs.com/projects/pview.php?id=311
Greenroof System: American Hydrotech
Architects: NBBJ Design
Civil Engineer & Landscape Architect: SvR Design Company
Roofing Contractor: Snyder Roofing
Landscape Architect/Greenroof Designer: SvR Design Company

Multi-layered waterproofing membrane integrated with a 6" deep engineered soil support system that includes insulation and drainage/moisture retention elements, all part of a total assembly supplied by American Hydrotech. The Justice Center used a custom mixture of nitrolized pine bark, sand, pumice, nutrients and peat.

Point Reyes Creeper, Barren Strawberry, carpet bugle, bearberry cotoneaster, potentilla, sheep fescue, woolly thyme, creeping thyme and sedum stonecrop. Some of the plants had to be replaced perhaps due to the fact there was initially not enough watering for establishment - the roof was retrofitted with drip irrigation after the fact.

Peter Steinbrueck, reporting for The Seattle Times on January 13, 2005 says the city's initial investment is paying off - "A 2003 study, commissioned by Seattle's Office of Sustainability and the Environment, revealed the Justice Center is saving as much as $148,000 each year due to its green roof."

Green Roof Cost Request Form

City/County/Company Name:	The Garland Company
Contact Name:	Greg Carothers
Contact Email:	gcarothers@garlandind.com
Contact Phone:	253-929-9089

Project Information

Project Name:	Extensive Green Roof
Project Type (Public or Private):	Both
Construction Date(s):	2011
Total Project Cost:	NA
Funding Source (if Public Project):	NA

Brief Project Description (include total green roof area, intensive or extensive design, soil media depth):

Evergreen State College (Extensive Green roof with 3 ply modified in Hot. 30 year warranty 24,000 sq ft)
Puget Sound Energy Factoria (Extensive Green roof with 3 ply modified in hot. 30 year warranty 18,000 sq ft)
Jones and Jones Architecture building for Bellevue Parks Dept. (Extensive Green Roof with 3 ply modified in hot 30 year warranty 1,200 sq ft)
Harrison Medical Center Bremerton (Extensive Green Roof with 3 ply modified Torch Applied. 30 year warranty 5,000 sq ft)

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Drainage Layer	square feet	$3.00	
Grass	square feet		
Gravel (if used)	cubic feet	$1.20	1-1/2 washed for perimeters
Irrigation System (if used)	square feet		
Mulch	cubic feet		
Outlet Drain	per unit		
Perennials (if used)	square feet		
Root Barrier (if used)	square feet	$2.20	
Small Trees (if used)	square feet		
Soil/Planting Media	cubic feet	$10.00	Pre-Engineered soil for lighter fully saturated loads
Waterproof Membrane	square feet	$9, 14	Low, high cost (dependent upon performance, warranty, access, etc.)
Woody Shrubs (if used)	square feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Green Roof	square feet	$23, 30	Low, high cost (dependent on how extensive the roof garden is)
Design	square feet		Garland Services are included with material purchase
Annual O&M (if known)	square feet	$0.10	Dependent upon water schedule, plant maintenance, etc

Additional Notes or Information

The Garland Roofing company is a high performance roofing company based in Cleveland OH. We have 5 regional salesman throughout the State of Washington to help with any roofing needs. Our typical application for a green roof would be one of our many combinations of modified inner ply sheets and cap sheets. A 3 ply system is our most predominantly used arrangement since we believe in redundant water protection below the growth media. Once the soil is on the roof it is very difficult to detect and repair leaks if they happen so we look to provide the most "bullet proof" waterproofing system possible so it is a non issue in the future. We provide many services at no cost with our projects that include: 1) Initial building evaluation 2) Product recommendations and budgets 3) Specification and drawing package development 4) Assistance with bid walks and pre-construction meetings 5) Weekly job site inspections 6) Final close out with the issue of a typical Garland 30 year water tight warranty. Garland also is part of U.S. Communities group purchasing co-op which proves to be a very successful procurement option for public work. This meets all state RCW and bid laws.

Infiltration Trenches

Infiltration Trench Cost Request Form

Project Information

Project Name:	Evergreen Terrace Phase 1
Project Type (Public or Private):	Public
Construction Date(s):	2008
Total Project Cost:	$365,586
Funding Source (if Public Project):	Stormwater Utility Funding

Brief Project Description (include number and types of BMPs installed):

Stormwater retrofit project to reduce recurrent localized flooding in neighborhood caused by failing drywells. Major project components included traffic control, 7 new CBs, 610 lf of 12" storm pipe, stormwater treatment. Additional runoff treatment beyond pretreatment was required due to sensitive aquifer.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Excavation	cubic feet		
Filter Fabric	square feet		
Grading/finishing	square feet		
Grass (if used)	square feet		
Gravel	cubic feet		
Mulch (if used)	cubic feet		
Observation Well	feet		
Perennials (if used)	square feet		
Soil/Planting Media (if used)	cubic feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Infiltration Trench	square feet	$73.71	Infiltration gallery (5' diam.), washed rock, rebuild paved roadway
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Costs from project completed in 2008. 10' deep excavation, entire roadway width, 136' long. Includes washed rock backfill, three 5' diameter perf CMP, rebuilding roadway. Does NOT include the Stormfilter Treatment system ($100,233), catch basins, or conveyance leading to Stormfilter/gallery. Costs also do NOT include mobilization, design, inspection, permits, traffic control, erosion/sediment control, removal of structures/obstructions, trimming and cleanup.

Project Information

Project Name:	Hawaiian Court Stormwater Improvements
Project Type (Public or Private):	Public
Construction Date(s):	2005
Total Project Cost:	$174,380
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed):

Project involved removing existing storm drain system and installing new catch basins, a treatment device, and a storage/disposal gallery. Storage/disposal gallery cost provided as a lump sum cost.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Backfilling	cubic feet		
Excavation	cubic feet	$0.39	Structure excavation Class B inc. haul
Filter Fabric	square feet		
Grading/finishing	square feet		
Grass (if used)	square feet	$0.25	Seeding cost
Gravel	cubic feet	$0.62	1 1/2" washed drain rock, assumes 1.4 TN/CY
Mulch (if used)	cubic feet		
Observation Well	feet		
Perennials (if used)	square feet		
Soil/Planting Media (if used)	cubic feet		
Infiltration Gallery	each	$51,440	60-Inch Perf. Alum. Steel 14 GA Pipe w/risers

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Infiltration Trench	square feet		
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

1 1/2" washed drain rock = $12/TN
Excavation (structure class B inc. haul) = $10.40/CY
Seeding = $11,000/acre

Annual O&M (if known)	square feet		

Additional Notes or Information

Porous Pavement Cost Request Form

City/County/Company Name:	City of Bellingham
Contact Name:	William M. Reilly
Contact Email:	wreilly@cob.org
Contact Phone:	360-778-7955

Project Information

Project Name:	Northshore Water Quality EV-78
Project Type (Public or Private):	Public
Construction Date(s):	2009 (June to Sept.)
Total Project Cost:	$538,264 (Cost for stormwater facility elements)
Funding Source (if Public Project):	SSWU, Street Fund

Brief Project Description (include type of porous pavement installed [asphalt, concrete, pavers, open-celled grid]):

Project was for creation of sidewalks and bike lanes adjacent to an existing arterial. Project added pervious sidewalks and pervious bike lanes and configured them to receive total runoff from the roadway. Below sidewalk and bike lanes a sand filtration system was constructed with underdrains and encapulated within filter fabric. Approximately 1 foot of space was left below the underdrain for infiltration into very tight soil. Short term infiltration rate of a approximately 0.1 inches per hour. A drainage area of approximately 9.3 acres including 1.83 acres of arterial street drains to a pervious area of 0.76 acres. To date there has been no outflow from the system. The entire area infiltrates to ground.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet	$0.67	1100 cy @ $18/cy incl. haul
Filter Fabric	square feet		Included with underdrain
Grading/finishing	square feet		
Gravel (filter course)	cubic feet		Included with underdrain
Gravel (reservoir course)	cubic feet		Included with underdrain
Observation Well	feet		
Porous Pavement Material	square feet	$7.10	Average (1400sy 4in @$62/sy, 2300sy 8in @$65/sy)
Underdrain Pipe	feet	$14	6,600 lf in place with rock and fabric

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Porous Pavement	square feet	$10.47	Pavement (33,300 SF) + underlying sand filter + excav
Design	square feet	$1.09	Portion of design cost for pavement/filter
Annual O&M (if known)	square feet		

Additional Notes or Information

Design cost is portion attributable to stormwater of $36,457/by 33,300 sf of pervious pavement. Likewise Porous Pavement cost based on $348,630/33,300.

Project Name:	Hastings Checker Block®
Project Type (Public or Private):	
Construction Date(s):	2011
Total Project Cost:	
Funding Source (if Public Project):	

Brief Project Description (include type of porous pavement installed [asphalt, concrete, pavers, open-celled grid]):

CHECKER BLOCK - POROUS OPEN CELLED GRID PAVER, MANUFACTURED IN CALIFORNIA.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet		
Filter Fabric	square feet		
Grading/finishing	square feet		
Gravel (filter course)	cubic feet		
Gravel (reservoir course)	cubic feet		
Observation Well	feet		
Porous Pavement Material	square feet	$3.50, 4.50	Low, high cost, depends on size of project, Open Celled Grid Pavers
Underdrain Pipe	feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Porous Pavement	square feet	$7.50, 15	Low, high cost, installation of Open Celled Grid Pavers
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Hastings Pavement Company is a Manufacturer of Checker Block ONLY. The cost information for other materials along with design and installation is not in our control. From our experience, **installed open-celled grid projects in general cost between $7.50 and $15.00/SF**. There are many variables including design requirements, stormwater objectives, subgrade conditions, traffic loading, labor costs, aggregate availability and costs, edge restraint requirements, etc.

City/County/Company Name:	Pierce County
Contact Name:	Dawn Anderson
Contact Email:	danders@co.pierce.wa.us
Contact Phone:	253-798-4671

Project Information

Project Name:	Sprinker Parking Lot LID - Phase 2
Project Type (Public or Private):	Public
Construction Date(s):	2010
Total Project Cost:	$1.25 million ($1.7 million for Phase 1 and 2)
Funding Source (if Public Project):	$1 million Department of Ecology LID grant ($115,000 grant for Phase 1)

Brief Project Description (include number and types of BMPs installed):

90,500 sf of impervious area converted to 48,500 sf porous concrete and 42,000 sf porous asphalt (Phase 1 and 2)
12,200 sf of impervious area converted to 3 bioretention areas (~ 600 plants)
305 sf recycled rubber sidewalk

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet	$0.43	Parking lot excavation, including haul
Filter Fabric	square feet		
Grading/finishing	square feet		
Gravel (filter course)	cubic feet		
Gravel (reservoir course)	cubic feet	$0.90	7" gravel base and 6" leveling course for porous asphalt
Observation Well	feet		
Porous Pavement Material	square feet	$1.27	4,645 SY of porous asphalt (3" depth)
Underdrain Pipe	feet	$6.25	4" perforated pipe
Drainage Sand	cubic feet	$1.31	2" of drainage sand below reservoir course

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Porous Pavement	square feet	$3.18	Inc. excavation, porous asphalt, drainage sand, reservoir, & leveling course
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Excavation - $11.60/CY
Porous asphalt pavement = $11.40/SY
Drainage sand = $35.50/CY
Gravel base = $24.40/CY

Project Information

Project Name:	Caldart Ave. Improvements Project
Project Type (Public or Private):	Public
Construction Date(s):	2006
Total Project Cost:	Approx. $1 million
Funding Source (if Public Project):	$263,000 Department of Ecology LID Grant

Brief Project Description (include number and types of BMPs installed):

The purpose of the 2006 Caldart Ave. Improvements Project was to improve traffic and pedestrian safety on a 1/3 mile segment of Caldart Avenue in Poulsbo. Several LID elements were included in the project design - they consist of approximately 2,200 feet of new 5 feet wide porous concrete sidewalks, 800 feet of bioretention swales, and a traffic island bioretention cell. ACE Paving Co., of Bremerton, WA installed all of the LID elements including both the pervious concrete sidewalks and bioretention cells.

$21,459 for 8,595 SF of porous concrete sidewalk

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	square feet		
Filter Fabric	square feet		
Grading/finishing	square feet		
Gravel (filter course)	cubic feet		
Gravel (reservoir course)	cubic feet		
Observation Well	feet		
Porous Pavement Material	square feet	$2.50	Porous concrete sidewalk (8,595 SF)
Underdrain Pipe	feet		

Estimated Cost for Installed Facility

Project Information

Project Name:	Mesford Pervious Sidewalk and Parking Lane Project
Project Type (Public or Private):	Public
Construction Date(s):	2010
Total Project Cost:	$400,000
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed):

This project was completed in 2010 and included construction of a 9' wide sidewalk, paved parallel parking and new pavement on the existing road. Low Impact Development (LID) techniques were used to handle storm water, including pervious concrete and pervious asphalt.

Received bids for porous concrete and porous asphalt sidewalk alternatives (10,035 SF). Also installed 9,000 SF of porous asphalt parking.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	square feet		
Filter Fabric	square feet		
Grading/finishing	square feet		
Gravel (filter course)	cubic feet		
Gravel (reservoir course)	cubic feet		
Observation Well	feet		
Porous Pavement Material	square feet	$2.33	Porous asphalt parking (9,000 SF)
Underdrain Pipe	feet		

Estimated Cost for Installed Facility

Project Name:	185th Ave NE Extension
Project Type (Public or Private):	Public
Construction Date(s):	2011
Total Project Cost:	$747,168 (includes monitoring); $33,576 design cost; $513,301 construction and CM
Funding Source (if Public Project):	$500,000 Department of Ecology LID grant

Brief Project Description (include number and types of BMPs installed):

Green stormwater infrastructure (570 linear feet of bioretention swales and 6,840 square feet of porous concrete sidewalk) as part of the 185th Avenue NE Extension project.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	square feet	$0.19	Based on $5/CY
Filter Fabric	square feet	$1.11	
Grading/finishing	square feet		
Gravel (filter course)	cubic feet		
Gravel (reservoir course)	cubic feet		
Observation Well	feet		
Porous Pavement Material	square feet	$3.62	6,840 sf porous concrete sidewalk
Underdrain Pipe	feet	$9.75	6- or 8-inch pipe

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Porous Pavement	square feet		
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Porous pavement cost provided as $32.55/SY
Gravel backfill around underdrain = $46.50/CY
Geomembrane = $10/SY

Project Information

Project Name:	Bear Creek Park WQ Facility
Project Type (Public or Private):	Public
Construction Date(s):	2011
Total Project Cost:	$442,127
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed):

This project includes construction of a stormwater wetland (4,400 sf) and associated piping and planting; construction of a concrete block retaining wall; stream buffer mitigation; tree replacement, installation of short soft-surface interpretative trail; and replacement of asphalt pedestrian/biking trail with porous pavement (7,800 sf).

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	square feet	$1.10	Removal of existing trail
Filter Fabric	square feet		
Grading/finishing	square feet		
Gravel (filter course)	cubic feet		
Gravel (reservoir course)	cubic feet	$3.40	Porous pavement base course (6" deep)
Observation Well	feet		
Porous Pavement Material	square feet	$4.52	7,800 sf porous asphalt (HMA)
Underdrain Pipe	feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Porous Pavement	square feet	$7.32	7,800 sf porous asphalt (HMA), 6" base course, removal of existing trail
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Porous pavement (HMA) = $125/TN or $35,350
Porous pavement base course = $38.35/TN or $13,269.10
Removal of existing trail = $8,600

Project Information

Project Name:	Green Alleys
Project Type (Public or Private):	Public
Construction Date(s):	2010
Total Project Cost:	NA
Funding Source (if Public Project):	NA

Brief Project Description (include type of porous pavement installed [asphalt, concrete, pavers, open-celled grid]):

Porous concrete (4-foot wide strip)

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet		
Filter Fabric	square feet		
Grading/finishing	square feet		
Gravel (filter course)	cubic feet		
Gravel (reservoir course)	cubic feet		
Observation Well	feet		
Porous Pavement Material	square feet		
Underdrain Pipe	feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Porous Pavement	square feet	$26	Construction cost
Design	square feet	$23.40	Soft costs (90% of construction costs)
Annual O&M (if known)	square feet	$0.02	

Additional Notes or Information

SPU's estimate per square foot mitigated is $6.50 (assumes 25% sizing factor, total cost per SF is $26). This cost is higher than costs in other jurisdiction for a number of reasons. First, construction in the geographical area of Seattle is very expensive. In addition, traffic management, labor and mobilization costs and natural resources/ materials are high. Second, the designs are complex since alleys are narrow, space is very tight, and the porous pavement must meet two criteria: the ability to be swept by regenerative sweepers and also perform in conveying stormwater.

City/County/Company Name:	Stoneway Concrete
Contact Name:	Mike Weeks
Contact Email:	mweeks@stonewayconcrete.com
Contact Phone:	425-226-1000 x 3314

Project Information

Project Name:	Many projects over 10 years
Project Type (Public or Private):	Both
Construction Date(s):	2002 to present
Total Project Cost:	
Funding Source (if Public Project):	Fed, state, city, county, and private work

Brief Project Description (include type of porous pavement installed [asphalt, concrete, pavers, open-celled grid]):

We are a concrete material supplier in central King County. We have supplied thousands of cubic yards of pervious concrete over the last 10 years in our market. Many projects for cities, parks, DOT's, housing authorities, schools, and private projects. We do not place or finish concrete, we only supply to contractors who do the actual placement.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet		
Filter Fabric	square feet		
Grading/finishing	square feet		
Gravel (filter course)	cubic feet		
Gravel (reservoir course)	cubic feet		
Observation Well	feet		
Porous Pavement Material	cubic yard	$125	Delivered to job site in mixer; cost provided in CY, not SF
Underdrain Pipe	feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Porous Pavement	square feet	$1.75	Labor and equipment and plastic; 20,000 to 75,000 SF project
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Stoneway Concrete mix EPC is designed for void contents of 15 to 25%. Actual in-place void content is dependant on placement methods and the work of others. The pervious material is per ACI 522. Our material includes a micro fiber and hydration stabilizer. Price includes these items and Environmental compliance. Addition items such as cold or hot weather placements, color, other admixtures are all additional to the $125/ CY noted above.

Project Information

Project Name:	Residential Stormwater Retrofit Project
Project Type (Public or Private):	Public
Construction Date(s):	2008-2011
Total Project Cost:	$74,603, barrel costs and installation only. Part of a larger grant including education, etc.
Funding Source (if Public Project):	Ecology Grant and SSWU

Brief Project Description (include number of rain barrels, storage volume, and material [polyethylene, etc.]):

This project provided state of the art rain barrels to homes in our Lake Whatcom Watershed for flow reduction and to homes that had roof leaders tied into our sanitary sewer system. 152 homes were served with the grant which included installation of 95 gallon corner rain barrels and all necessary plumbing. Water is slowly let out through an orifaced dispersal system during the winter and water can be stored in summer for reuse. A total of 305 barrels were installed to derive this record.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Rain Barrel	per unit	$197.94	95 gal brl,incl msqto scr., spgts & overflow
Gutter Connection	per unit	$25.43	Connections, dispersal system, foundation
Installation Labor	per unit	$21.23	Labor at $12/hr, each barrel requires approx. 1.77 hrs for installation

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Rain Barrel	per unit		
Annual O&M (if known)	per unit

Project Information

Project Name: Deluxe Rain Barrel
Project Type (Public or Private):
Construction Date(s): 2011
Total Project Cost:
Funding Source (if Public Project):

Brief Project Description (include number of rain barrels, storage volume, and material [polyethylene, etc.]):

Materials: Sturdy polyethylene with 25% recycled content
Size: 36" H x 28" diameter
Include debris screen, spigot, overflow outlet, 4' hose

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Rain Barrel	per unit	$169	75 gallon, does not inc. shipping ($45.28)
Gutter Connection	per unit	$29.95	Downspout diverter

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Rain Barrel	per unit		
Annual O&M (if known)	per unit		

Additional Notes or Information

Rain Barrel Cost Request Form

City/County/Company Name:	City of Puyallup
Contact Name:	Joy Rodriguez
Contact Email:	jrodriguez@ci.puyallup.wa.us
Contact Phone:	253-841-5549

Project Information

Project Name:	Puyallup's 2011 Rain Garden Program
Project Type (Public or Private):	Public
Construction Date(s):	2011 (July and Sept.)
Total Project Cost:	$686.39
Funding Source (if Public Project):	Department of Ecology Capacity Grant

Brief Project Description (include number of rain barrels, storage volume, and material [polyethylene, etc.]):

The 2011 Rain Garden Program included two installations with rain barrel elements. A total of 8 rain barrels where installed during this project, with much citizen interest and potential action resulting from education on this easy-to-implement LID feature.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Rain Barrel	per unit	$85	Includes 60 gal rain barrel, assembled
Gutter Connection	per unit	$2.50	Includes flex elbow
Connection/Use kit	per unit	$13	Includes overflow hose, splitter
Installation	per unit	$29	Includes cinder blocks, labor

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Rain Barrel	per unit	$129.50	Total pre-tax cost
Annual O&M (if known)	per unit		

Additional Notes or Information

For the 2011 program, 3 of the 8 rain barrels were donated by Dan Borba of Rain Water Gizmos and Gadgets (www.naturalrainwater.com). The Total Project Cost indicated on row 13 above is for 5 barrels, installed. The referenced website provides cost information as follows: Rain Barrel, 50 or 60 gal: $85; connector kit (overflow hose, splitter): $14.99.

Project Information

Project Name:	Channel Islands Rain Barrel
Project Type (Public or Private):	
Construction Date(s):	2011
Total Project Cost:	
Funding Source (if Public Project):	

Brief Project Description (include number of rain barrels, storage volume, and material [polyethylene, etc.]):

Dimensions: 23"W x 18"D x 30" H
Materials: Made from UV Protected Polyethylene
Includes 4-ft garden hose, on/off hose valve, dual overflow on back of barrel, screened intake

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Rain Barrel	per unit	$195	47 gallon, does not inc. shipping ($45)
Gutter Connection	per unit		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Rain Barrel	per unit		
Annual O&M (if known)	per unit		

Additional Notes or Information

Project Information

Project Name:	Flora Sherwood Rain Barrel & Planter
Project Type (Public or Private):	
Construction Date(s):	2011
Total Project Cost:	
Funding Source (if Public Project):	

Brief Project Description (include number of rain barrels, storage volume, and material [polyethylene, etc.]):

55 Gallon Rain Barrel doubles as planter
Includes 3/4 drain valve with garden hose threads and 1-1/2 hidden overflow
Size: 26" height x 26" width x 26" depth
Materials: Durable polyethelyne plastic

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Rain Barrel	per unit	$259	55 gallon, does not inc. shipping ($65)
Gutter Connection	per unit		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Rain Barrel	per unit		
Annual O&M (if known)	per unit

Project Information

Project Name:	Forester Rain Barrel
Project Type (Public or Private):	
Construction Date(s):	2011
Total Project Cost:	
Funding Source (if Public Project):	

Brief Project Description (include number of rain barrels, storage volume, and material [polyethylene, etc.]):

Size: 30 1/2"H x 22" Diameter (widest point)
Includes brass spigot and security screen

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Rain Barrel	per unit	$168	50 gallon, does not inc. shipping ($45)
Gutter Connection	per unit		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Rain Barrel	per unit		
Annual O&M (if known)	per unit

Project Information

Project Name: Great American Rain Barrel
Project Type (Public or Private):
Construction Date(s): 2011
Total Project Cost:
Funding Source (if Public Project):

Brief Project Description (include number of rain barrels, storage volume, and material [polyethylene, etc.]):

Size: 39"H x 24" Diameter
Material: Recycled food-grade barrels
Each individual unit comes complete with threaded spigot (for easy hose attachment), overflow fitting, drain plug, screw-on cover, and complete instructions.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Rain Barrel	per unit	$166	60 gallon, does not inc. shipping ($55)
Gutter Connection	per unit		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Rain Barrel	per unit		
Annual O&M (if known)	per unit

Project Information

Project Name: Mega Rain Barrel
Project Type (Public or Private):
Construction Date(s): 2011
Total Project Cost:
Funding Source (if Public Project):

Brief Project Description (include number of rain barrels, storage volume, and material [polyethylene, etc.]):

Size: 36"height x 27"width x 24"depth
Materials: Virgin resin
Includes reinforced screen inlets, internal overflow tube, bucket-high spigot

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Rain Barrel	per unit	$349	80 gallon, does not inc. shipping ($95)
Gutter Connection	per unit		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Rain Barrel	per unit		
Annual O&M (if known)	per unit

Project Information

Project Name:	Niagara Falls Rain Barrel
Project Type (Public or Private):	
Construction Date(s):	2011
Total Project Cost:	
Funding Source (if Public Project):	

Brief Project Description (include number of rain barrels, storage volume, and material [polyethylene, etc.]):

Size Dimensions: 22"W x 16"D x 32"H
Materials: Durable, UV-stable polyethylene
Includes removable debris screen, built-in 4-ft hose, and linking kit

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Rain Barrel	per unit	$177.50	50 gallon, does not inc. shipping ($45)
Gutter Connection	per unit		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Rain Barrel	per unit		
Annual O&M (if known)	per unit

Project Information

Project Name: The Rain Catcher
Project Type (Public or Private):
Construction Date(s): 2011
Total Project Cost:
Funding Source (if Public Project):

Brief Project Description (include number of rain barrels, storage volume, and material [polyethylene, etc.]):

Size: 32" H x 24" W
Composition: made from recycled materials
Strong aluminum mesh screen (non-corrosive), overflow feature draws water down and out of the bottom front of barrel

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Rain Barrel	per unit	$170	54 gallon, does not inc. shipping ($45)
Gutter Connection	per unit		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Rain Barrel	per unit		
Annual O&M (if known)	per unit

Project Information

Project Name:	Wood Grain Rain Barrel
Project Type (Public or Private):	
Construction Date(s):	2011
Total Project Cost:	
Funding Source (if Public Project):	

Brief Project Description (include number of rain barrels, storage volume, and material [polyethylene, etc.]):

Size: 33" Tall x 23" Wide x 18" Deep
Composition: UV stabilized plastic resin
Includes screen at top to keep out debris, spigot, shut off value for hose hook up, and overflow port
Optional Link Kit ($34.25) allows linkage to other barrels for increased water storage capacity.
Optional Barrel Stand ($72.90 + $20 shipping) creates larger offset between the spigot and the ground, making it easier to fill watering cans and for general use.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Rain Barrel	per unit	$215	50 gallon, does not inc. shipping ($45)
Gutter Connection	per unit		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Rain Barrel	per unit		
Annual O&M (if known)	per unit		

Additional Notes or Information

Wet Ponds

Wet Pond Cost Request Form

City/County/Company Name:	City of Bellingham
Contact Name:	William M. Reilly
Contact Email:	wreilly@cob.org
Contact Phone:	360-778-7955

Project Information

Project Name:	Northridge Sand Filter Detention Pond
Project Type (Public or Private):	Public
Construction Date(s):	2008 (August/September)
Total Project Cost:	$300,550
Funding Source (if Public Project):	SSWU

Brief Project Description (include number and types of BMPs installed, live and dead storage capacity of wet ponds):

Project converted an existing dry detention pond to a sand filter and detention pond. Sand filter used for removal of phosphorus in Lake Whatcom. Project costs include $40,000 for land to expand foot print of facility. Inlet and Outlet structures for detention reused.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet	$0.44	1,200 cy @$12/cy
Grading/finishing	square feet		
Grass	square feet	$1.11	Sod 450 sy @$10/sy
Gravel	cubic feet		
Inlet Structure	per unit		
Outlet Structure	per unit		
Seal	square feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Wet Pond	square feet	$21.02	14,300 sf
Design	square feet	$4.06	$58,000 total
Annual O&M (if known)	square feet		

Additional Notes or Information

Grading and planting of adjacent one acre field included in cost. It was a part of a contract with the landowner for property transaction. Estimated cost $20,000. This project was complicated by the City needing to deal with a homeowners association to trade property purchased by the City for 40 k with land immediately adjacent to the existing pond.

Project Information

Project Name:	2011 Street Overlay Project
Project Type (Public or Private):	Public
Construction Date(s):	2011
Total Project Cost:	NA
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed, live and dead storage capacity of wet ponds):

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet	$1.30	Pond excavation inc. haul
Grading/finishing	square feet		
Grass	square feet	$0.10	Seeding, fertilizing, and mulching
Gravel	cubic feet	$6.74	Quarry spalls, assumes 1.4 TN/CY
Inlet Structure	per unit	$1,050	Catch Basin Type 1
Outlet Structure	per unit	$2,465	Catch Basin Type 2 - 48 In. Diam
Seal	square feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Wet Pond	square feet		
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Excavation = $35/CY (pond excavation including haul)
Seeding, fertilizing, and mulching = $4,400 per acre
Quarry spalls = $130/TN

Wet Pond Cost Request Form

Project Information

Project Name:	Norfolk - MLK Way Sub-basin Stormwater Improvements Project
Project Type (Public or Private):	Public
Construction Date(s):	2006 (report date)
Total Project Cost:	$4,424,000 (estimated)
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed, live and dead storage capacity of wet ponds):

This cost estimate came from the Norfolk - MLK Way Sub-basin Stormwater Improvements Project Development Plan for the recommended treatment option (Treatment Option B: Construct a deep wet pond on the City-owned property west of I-5):
- 8-foot deep, 2-cell wet pond
- 7.3 acre-ft capacity
- High flow bypass

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet	$1.48	Includes excavation, haul, and disposal
Grading/finishing	square feet		
Grass	square feet	$0.21	Hydroseeding on pond slopes above WSE
Gravel	cubic feet	$2.96	Quarry spalls
Inlet Structure	per unit		
Outlet Structure	per unit	$13,500	Pond outlet (Type 204A manhole)
Seal	square feet		
Soil/Planting Media	cubic feet	$1.56	Topsoil, type A
Woody Shrubs	each	$19	Plantings at pond fringe
Bird Exclusion Netting	acre	$25,000	Over pond maximum WSE

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Wet Pond	cubic feet	$10.64	Based on 317,988 CF (7.3 acre-ft)
Design	cubic feet	$0.52	Based on $165,000 consultant design cost
Annual O&M (if known)	cubic feet	$0.025	Does not include dredging (every 10-25 yrs)

Additional Notes or Information

Excavation = $40/CY
Mineral aggregate (Type 17) for maintenance access road and bottom of first pond cell = $31/CY
Quarry spalls (for erosion control spillway) = $47/TN, assumes 1.7 TN/CY
Topsoil (Type A) = $42/CY

Project Information

Project Name:	Mallard Pond Wetland Enhancement Project
Project Type (Public or Private):	Public
Construction Date(s):	2005
Total Project Cost:	$543,336
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed, live and dead storage capacity of wet ponds):

Project increased the size of the existing stormwater pond and constructed two new ponds in the 200-foot buffer of the Mallard Pond wetlands. Existing size and capacity = 20,000sf and 91,500cf. New size and capacity = 47,000sf and 178,600cf. Added size and capacity = 27,000sf and 87,100cf.

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet		
Grading/finishing	square feet		
Grass	square feet		
Gravel	cubic feet		
Inlet Structure	per unit		
Outlet Structure	per unit		
Seal	square feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Wet Pond	cubic feet	$6.24	87,100 cf (added capacity), inc. plantings
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Wet pond cost = $20.12 per SF or $6.24 per CF

Project Information

Project Name:	SR 18 Maple Valley to Issaquah Hobart Road - Basin CR-1
Project Type (Public or Private):	Public
Construction Date(s):	2003
Total Project Cost:	$8,170,000 (stormwater treatment component of SR-18 project)
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed, live and dead storage capacity of wet ponds):

Construction Cost $197,597
Right of Way Cost $904,100
Structure Footprint 1.69 acre
Capacity 59,044 cu ft
Impervious Area Treated 3.69 acre ($6.85/sq ft of impervious area)
Total Drainage Area 4.32 acre

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet	$0.28	Overexcavation inc. haul
Grading/finishing	square feet		
Grass	square feet	$0.02	Seeding, fertilizing, and mulching
Gravel	cubic feet	$0.73	Quarry spalls, assumes 1.4 TN/CY
Inlet Structure	per unit		
Outlet Structure	per unit		
Seal	square feet	$0.56	Geosynthetic clay liner
Soil/Planting Media	cubic feet	$0.30	Topsoil, Class B
Debris Cage	each	$1,250	

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Wet Pond	cubic feet	$3.34	59,044 CF wet pond, does not inc. ROW cost
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Pond overexcavation inc. haul = $7.50/CY
Geosynthetic clay liner = $5/SY
Seeding, fertilizing, and mulching = $800/acre
Topsoil, Class B = $8/CY
Quarry spalls = $14.05/TN

Project Information

Project Name:	SR 18 Maple Valley to Issaquah Hobart Road - Basin TC-1N
Project Type (Public or Private):	Public
Construction Date(s):	2003
Total Project Cost:	$8,170,000 (stormwater treatment component of SR-18 project)
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed, live and dead storage capacity of wet ponds):

Construction Cost $64,460
Right of Way Cost $60,500
Structure Footprint 0.22 acre
Capacity 10,770 cu ft
Impervious Area Treated 1.53 acre ($1.87/sq ft of impervious area)
Total Drainage Area 3.62 acre

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet		
Grading/finishing	square feet		
Grass	square feet		
Gravel	cubic feet		
Inlet Structure	per unit		
Outlet Structure	per unit		
Seal	square feet		
Soil/Planting Media	cubic feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Wet Pond	cubic feet	$5.99	10,770 CF wet pond, does not inc. ROW cost
Design	square feet		
Annual O&M (if known)	square feet

Project Information

Project Name:	SR 18 Maple Valley to Issaquah Hobart Road - Basin TC-1S
Project Type (Public or Private):	Public
Construction Date(s):	2003
Total Project Cost:	$8,170,000 (stormwater treatment component of SR-18 project)
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed, live and dead storage capacity of wet ponds):

Construction Cost $34,003
Right of Way Cost $183,150
Structure Footprint 0.13 acre
Capacity 1,170 cu ft
Impervious Area Treated 0.23 acre ($21.67/sq ft of impervious area)
Total Drainage Area 0.23 acre

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet		
Grading/finishing	square feet		
Grass	square feet		
Gravel	cubic feet		
Inlet Structure	per unit		
Outlet Structure	per unit		
Seal	square feet		
Soil/Planting Media	cubic feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Wet Pond	cubic feet	$29.06	1,170 CF wet pond, does not inc. ROW cost
Design	square feet		
Annual O&M (if known)	square feet

Project Information

Project Name:	SR 18 Maple Valley to Issaquah Hobart Road - Basin TC-3
Project Type (Public or Private):	Public
Construction Date(s):	2003
Total Project Cost:	$8,170,000 (stormwater treatment component of SR-18 project)
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed, live and dead storage capacity of wet ponds):

Construction Cost $673,913
Right of Way Cost $236,900
Structure Footprint 2.72 acre
Capacity 202,733 cu ft
Impervious Area Treated 6.26 acre ($3.34/sq ft of impervious area)
Total Drainage Area 15.94 acre

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet		
Grading/finishing	square feet		
Grass	square feet		
Gravel	cubic feet		
Inlet Structure	per unit		
Outlet Structure	per unit		
Seal	square feet		
Soil/Planting Media	cubic feet		
Dewatering	lump sum	$15,000	

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Wet Pond	cubic feet	$3.32	202,733 CF wet pond, does not inc. ROW cost
Design	square feet		
Annual O&M (if known)	square feet

Project Information

Project Name:	SR 18 Maple Valley to Issaquah Hobart Road - Basin TC-4
Project Type (Public or Private):	Public
Construction Date(s):	2003
Total Project Cost:	$8,170,000 (stormwater treatment component of SR-18 project)
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed, live and dead storage capacity of wet ponds):

Construction Cost $314,775
Right of Way Cost $22,520
Structure Footprint 1.52 acre
Capacity 100,633 cu ft
Impervious Area Treated 3.88 acre ($2.00/sq ft of impervious area)
Total Drainage Area 8.78 acre

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet		
Grading/finishing	square feet		
Grass	square feet		
Gravel	cubic feet		
Inlet Structure	per unit		
Outlet Structure	per unit		
Seal	square feet

Project Information

Project Name:	SR 18 – 180th to Maple Valley - Detention Pond A
Project Type (Public or Private):	Public
Construction Date(s):	2001
Total Project Cost:	$2,225,000 (stormwater treatment component of SR-18 project)
Funding Source (if Public Project):	NA

Brief Project Description (include number and types of BMPs installed, live and dead storage capacity of wet ponds):

Pond Cost $100,500
Structure Footprint 0.345 acre
Capacity 60,113 cu ft
Impervious Area Treated 11.2 acre ($0.21/sq ft of impervious area)
Total Drainage Area 17.4 acre

Estimated Costs per Facility Component

Item	Units	Unit Cost	Notes
Excavation	cubic feet		
Grading/finishing	square feet		
Grass	square feet	$0.02	Seeding, fertilizing, and mulching
Gravel	cubic feet	$1.04	Quarry spalls, assumes 1.4 TN/CY
Inlet Structure	per unit		
Outlet Structure	per unit		
Seal	square feet		
Soil/Planting Media	cubic feet		

Estimated Cost for Installed Facility

Item	Units	Unit Cost	Notes
Wet Pond	cubic feet	$1.67	60,113 CF detention pond
Design	square feet		
Annual O&M (if known)	square feet		

Additional Notes or Information

Seeding, fertilizing, and mulching = $780/acre
Quarry spalls = $20/TN
