September 29, 2016

Dear Interested Parties, Jurisdictions, Tribes and Agencies:

Enclosed for your review and comment is the Draft Programmatic Environmental Impact Statement (EIS) for the Chehalis Basin Strategy, prepared by the Washington State Department of Ecology (Ecology) under the State Environmental Policy Act (SEPA). The Chehalis Basin Strategy is being evaluated at the request of the Governor's Chehalis Basin Work Group (Work Group), tasked by the Governor to develop recommendations for near-term and long-term actions to reduce flood damage and restore aquatic species habitat.

The Draft EIS evaluates a series of actions to address these key flooding and habitat challenges in the Chehalis Basin. This environmental review provides a formal process to evaluate how a suite of actions works together to reduce flood threats and improve aquatic habitat and other alternative actions. The process helps decision makers and the public understand the effectiveness of specific actions and how they would affect people and the environment.

The Draft EIS includes four action alternatives, which combine flood damage reduction actions and aquatic species habitat actions. All action alternatives include the same Local-scale Flood Damage Reduction actions (i.e., Floodproofing, Local Projects, Land Use Management, and Flood Warning System Improvements) and Aquatic Species Habitat actions (both low and high scenarios). The action alternatives differ by which Large-scale Flood Damage Reduction actions (i.e., Flood Retention Facility, Airport Levee Improvements, I-5 Projects, Aberdeen/Hoquiam North Shore Levee, and Restorative Flood Protection) are included.

In addition to the four action alternatives, a No Action Alternative is included, which is intended to represent the most likely future expected in the absence of implementing an action alternative. Under the No Action Alternative, actions to reduce flood damage and improve aquatic habitat conditions would continue to a lesser extent than in the action alternatives, and in a piecemeal fashion.

Public comments are requested September 29 through October 31, 2016. All comments on the Draft EIS received during the public comment period will be addressed in the Final EIS, planned for issuance in 2017.

Interested Parties, Jurisdictions, Tribes and Agencies

FACT SHEET

Project Title

Chehalis Basin Strategy: Reducing Flood Damage and Restoring Aquatic Species Habitat

Brief Description of Proposal

The Washington State Department of Ecology (Ecology) prepared this Draft Programmatic Environmental Impact Statement (EIS) to evaluate the Chehalis Basin Strategy alternatives designed to reduce flood damage and restore aquatic species habitat in the Chehalis Basin in Southwestern Washington. This Draft EIS was prepared in compliance with the Washington State Environmental Policy Act (SEPA), and Ecology is the lead agency.

The SEPA nonproject action is the adoption of a program called the Chehalis Basin Strategy. The strategy is a program of integrated, long-term, flood damage reduction and aquatic species habitat restoration actions. The EIS evaluates how combinations of actions could function together to meet the dual purpose and need of reducing flood damage and restoring aquatic species habitat. The EIS includes four action alternatives, which are characterized by different combinations of flood damage reduction and aquatic species habitat restoration action elements. Each action alternative includes one or a combination of Large-scale Flood Damage Reduction Actions (i.e., Flood Retention Facility, Airport Levee Improvements, I-5 Projects, Aberdeen/Hoquiam North Shore Levee, and Restorative Flood Protection). All action alternatives include the same Local-scale Flood Damage Reduction Actions (i.e., Floodproofing, Local Projects, Land Use Management, and Flood Warning System Improvements) and Aquatic Species Habitat Actions (both low and high scenarios). In addition, a No Action Alternative is included, which is intended to represent the most likely future expected in the absence of implementing an action alternative. Under the No Action Alternative, actions to reduce flood damage and improve aquatic habitat conditions would continue to a lesser extent than in the action alternatives, and in a piecemeal fashion.

Permits, Licenses, and Approvals Required

Numerous regulations, plans, laws, and treaty obligations guided or influenced the development of this EIS. Because this is a programmatic EIS for a nonproject action, and the specific nature of projects that would be proposed under the Chehalis Basin Strategy is not yet known, it is not possible to present a complete list of permits, licenses, and approvals that could be required for the components of the strategy.

Implementation of the alternatives in the EIS would require compliance with regulations and plans at federal, state, and local levels. To implement the action alternatives or their action elements, the lead agency and project proponent would need to comply with applicable laws, regulations, and Executive Orders. Examples of those commonly associated with flood damage reduction and aquatic species habitat restoration actions, which may apply, are as follows:

- State Environmental Policy Act
- National Environmental Policy Act
- Endangered Species Act
- National Historic Preservation Act
- Magnuson-Stevens Fishery Conservation and Management Act
- Section 10, Rivers and Harbors Act
- Sections 401, 402, and 404, Clean Water Act
- Washington Coastal Zone Management Act
- Fish and Wildlife Coordination Act
- National Forest Management Act
- Federal Emergency Management Agency Guidelines for Flood Risk Analysis and Mapping
- Executive Order 11988: Floodplain Management
- Washington State Hydraulic Code
- Washington State Shoreline Management Act
- Governor's Executive Order 05-05: Archeological and Cultural Resources
- Washington Forest Practices Act
- Water Right Permit
- Reservoir Permit
- Dam Safety Construction Permit
- Sand and Gravel General Permit
- Construction Stormwater General Permit
- Land Clearing Burning Permit
- Grading Permit
- Building Permit

- Aquatic Use Authorization
- Railroad right-of-way use/permits
- Local floodplain management ordinances
- Local critical areas codes, zoning ordinances, and other land use requirements

Authors and Contributors

A list of the individuals from Ecology, other state agencies, tribes, and consulting firms who participated in the EIS evaluation is provided in Chapter 8.

Date of Issue

September 29, 2016

Public Comment on the Draft Programmatic Environmental Impact Statement

A public comment period is being conducted from September 29 through October 31, 2016, in accordance with Washington Administrative Code (WAC) 197-11-455. All comments on the Draft EIS received during the public comment period will be addressed in the Final EIS, planned for issuance in 2017. Comments on the Draft EIS can be submitted in the following ways:

Timing of Additional Environmental Review

The analysis in this EIS is programmatic in nature and has been prepared to disclose probable significant adverse impacts associated with the Chehalis Basin Strategy. Any individual actions that are carried forward will require additional, more detailed, project-level environmental review prior to implementation. These projects and actions could require SEPA compliance, National Environmental Policy Act compliance, or both, depending on the implementing agency, source of funding, and/or types of permits required. If a decision is made to implement the Chehalis Basin Strategy, some projects and

actions could be advanced and ready for additional environmental review in 2017; others could require several years before they would be advanced for implementation.

Document Availability

The Draft EIS for the Chehalis Basin Strategy is available online at:

<http://www.ecy.wa.gov/programs/sea/sepa/chehalisbasin.html>. Print copies or CDs of the document may be obtained by written request to the EIS Project Manager, Chrissy Bailey, at chrissy.bailey@ecy.wa.gov, or by calling (360) 407-6781. Persons with hearing loss can call 711 for Washington Relay Service, including TTY service. Persons with a disability can call 1-866-833-6341 to access a Communications Assistant with Washington's Speech-to-Speech service.

La Cuenca de Chehalis tiene problemas con inundaciones y la degradación del hábitat acuático. El Departamento de Ecología del Estado de Washington invita al público a comentar sobre las acciones que se quiere usar para corregir los problemas. El periodo de comentario público es del 29 de septiembre hasta el 31 de octubre, 2016. Para obtener más información, favor de comunicarse con Gretchen Newman al (360) 407-6097 o por correo electrónico a preguntas@ecy.wa.gov.

Location of Background Materials

During the past several years, Ecology has worked in coordination with local governments, other agencies, and community leaders to study the Chehalis Basin. The agency has collaborated with residents, stakeholders, and other agencies to identify potential solutions that will reduce flood damage and restore aquatic species habitat. The EIS builds off this completed work. Background materials used in the preparation of the Draft EIS are available online through the following links:
