B22C089-BSD4	LCS Duplicate	#2 Diesel	93	—	%	0.08	pass	—

QC = quality control; MQO = measurement quality objectives; N/A = not applicable; RPD = relative percent difference; Qualifiers: U = analyte not detected at or above the reported sample quantitation limit, J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample, NAF = not analyzed for.

Table B-2. Quality control samples for the MEL-analyzed supplemental parameters. Pass/Fail is based on the comparison with project MQOs.

Sample ID	Analyte	Result	Units	Qualifier	Method	RPD	QC type	Pass/Fail

QC = quality control; MQO = measurement quality objectives; N/A = not applicable; NC = not calculated; RPD = relative percent difference. Qualifiers: U = analyte not detected at or above the reported sample quantitation limit, J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

Table B-3. Quality control samples for the contract lab-analyzed supplemental parameters. Pass/Fail is based on the comparison with project MQOs.

Qualifiers: U = analyte not detected at or above the reported sample quantitation limit, J = The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
